### TOOLS:

- [Heat Gun](#) (1)
  - [Phillips #000 Screwdriver](#) (1)
  - [iFixit Opening Picks set of 6](#) (1)
  - [Metal Spudger](#) (1)
  - [Tweezers](#) (1)
-

## Step 1 — Nexus 5X Teardown

- Remove SIM card tray.

## Step 2

- Use guitar picks to loosen clips securing rear cover and remove back cover.

 A handy notch is also available for back panel removal.

## Step 3

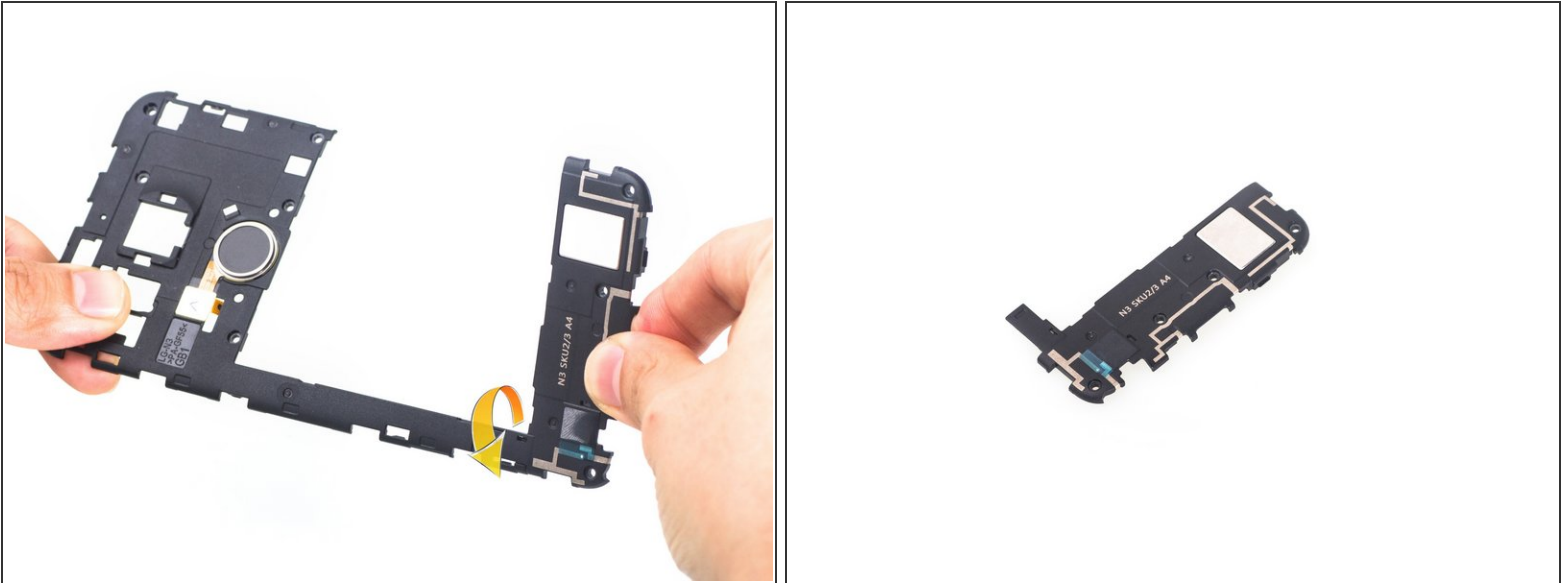

- Twist off 10 Phillips screws together.
- Pry up bottom half and upper half of middle frame.
- ⓘ Clips securing midframe exists, be careful to pry up it.

## Step 4

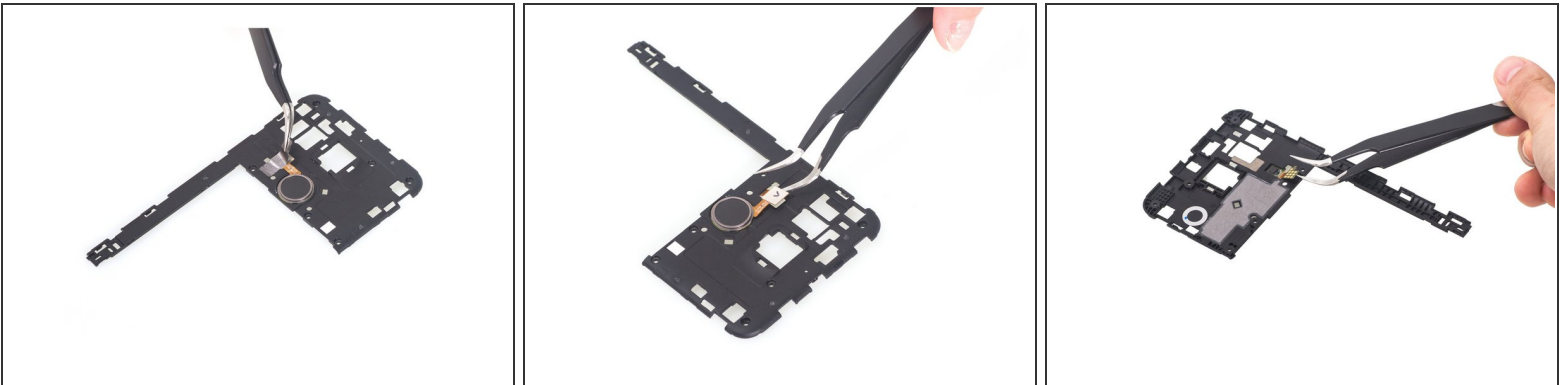

- Here is the whole middle frame.
- ★ The bottom half includes loudspeaker. The top half comes with fingerprint scanner.

## Step 5

- A flexible clip is here. Loosen it and get the loudspeaker assembly only.

## Step 6

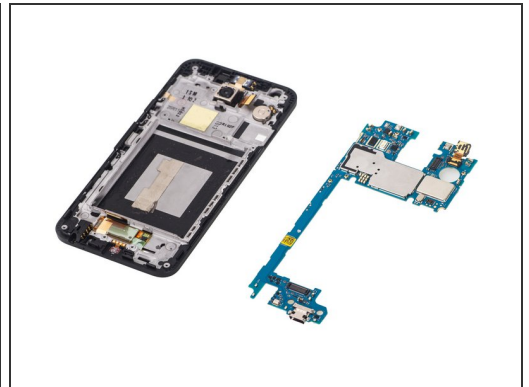

- Tear tape firstly.
- Loosen adhesive at both sides.

## Step 7

- Release battery connector.
- Pry up and remove battery ( Adhesive underneath is not strong).

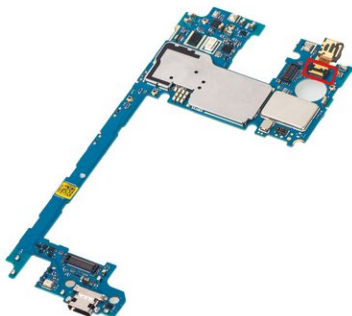

## Step 8

- Loosen LCD screen connector and rear camera connector.
- Pry up and remove motherboard assembly.

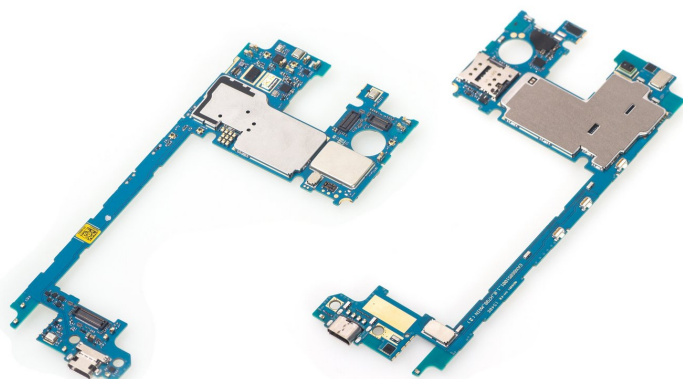

## Step 9

- Release front camera connector and remove it.

## Step 10

- Here come with motherboard only.

## Step 11

- The adhesive underneath rear camera is strong. Be careful to pry up and remove it.

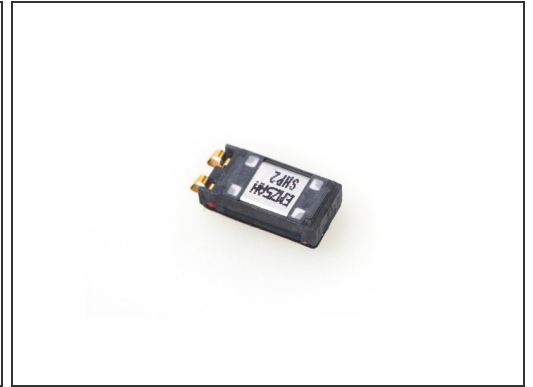

## Step 12

- Adhesive underneath vibration motor is a little bit strong. Pry it up carefully.

## Step 13

- Tear tape securing earpiece.
- Use tweezers to pry up earpiece.

## Step 14

- Remove headphone jack.

## Step 15

- The sticker underneath LCD with digitizer is a little bit strong, so use heat gun to soften it for a few minutes.
- With the help of suction cup and guitar picks, remove LCD screen carefully.

## Step 16

- Done.
