INTRODUCTION

This guide details the steps required to replace buttons on the back face of the camera. Please use this guide only when a specific button is not working. When the problem involves other parts of the camera or all of the buttons, you may need to replace a component of the circuit board.

TOOLS:

- Phillips #000 Screwdriver (1)
- Metal Spudger (1)
- Tweezers (1)

This document was generated on 2019-09-23 02:34:49 AM (MST).

Step 1 — Motherboard

● Unscrew all eight black, 4mm screws with a Philips 000. (The top-most screw shown in the third image can be accessed by lifting the cover flap off.)
Step 2

● Pry case open with a metal spludger by slipping the spludger between the back and front case of the camera and wiggling the spludger forwards and backwards.
⚠️ Be careful not to damage the inner components of the camera when slipping the spludger into the camera.

Step 3

- Carefully unhook the silver strip with tweezers. Get a grasp of the sides of the silver strip with the tweezers, and pull upwards and out.

- The strip may also be identified by its blue tip, which becomes more visible once pulled out.
Step 4 — Buttons

- Unscrew the two, right-most, 2 mm screws with a Philips 000.

- Unscrew the left-most, 4 mm screw with a Philips 000.

Step 5

- Slide off the button panel in the marked direction.

Step 6

- Flip to the front side of the button panel to access the button sensors.

To reassemble your device, follow these instructions in reverse order.
