

# Nikon D70 Memory Compression Board Replacement

Written By: Andrew Bookholt

---

## INTRODUCTION

Use this guide to replace the memory compression board.

### TOOLS:

- [Phillips #00 Screwdriver](#) (1)
  - [Tweezers](#) (1)
-

## Step 1 — Battery

- Use your finger tip to pull the battery release tab toward the center of the D70.
- Open the battery door and rotate it away from the bottom cover.

## Step 2

- Pull the battery out of the D70.
- ⓘ It may be necessary to wiggle the battery while pulling to free it from its pocket in the case.

### Step 3 — Bottom Cover

- Remove the following eight screws securing the bottom cover to the D70:
  - Six 5.8 mm Phillips screws
  - One 10.7 mm Phillips screws
  - One 8.2 mm Phillips screws

### Step 4

- Carefully pull the bottom cover to separate it from the body of the D70.
- Remove the bottom cover from the D70.

## Step 5 — Memory Compression Board

- Remove the four ZIF ribbon cables highlighted in red by using the following procedure:
  - Use your fingernail to flip up the ZIF cable retaining flap on each socket.
- ⚠ Be sure you are prying up the retaining flap, **not** the socket.
- Pull the ribbon cable straight out of its socket.

## Step 6

- Carefully peel back the piece of tape covering the Compact Flash ribbon cable socket.
- ⓘ It is not necessary to completely remove this piece of tape.

## Step 7

- Use your fingernails to carefully pull the ZIF cable lock away from its socket.
- ⚠ Do not try to completely remove the ZIF cable lock. It will move about 1 mm and stop.
- Use a pair of tweezers to pull the Compact Flash ribbon cable out of its socket.

## Step 8

- ☑ Be sure not to lose the small iron core around the DC-In ribbon cable.

## Step 9

- Remove the four 4.3 mm Phillips screws securing the memory compression board to the D70.

## Step 10

- Use a pair of tweezers to pull the USB connector bracket away from the edge of the memory compression board.

## Step 11

- Grab the memory compression board by its edges at the position shown in the first picture.
- Pull the memory compression board straight up off the DC/DC board to avoid damaging the connector on the underside of the memory compression board.

To reassemble your device, follow these instructions in reverse order.
