

Nikon D7100 LCD Screen Replacement

If the LCD screen is cracked or broken you will need to disassemble the camera to fix this problem.

Written By: Wesley Eveld

TOOLS:

- [JIS #000 Screwdriver](#) (1)
-

Step 1 — LCD Screen

- Remove the five screws on the bottom of the camera with a JIS #000 head screwdriver.

Step 2

- Remove the 3 screws under the battery flap and remove the bottom cover.

Step 3

- Remove the 2 screws inside the camera on the back corners.

Step 4

- Open the HDMI flap and remove the 2 screws.

Step 5

- Remove the screw next to the camera strap loop.

Step 6

- Remove the 2 screws on each side of the view finder.

Step 7

- Remove the 2 screws above and below the SD card flap.

Step 8

- Peel off the adhesive leather screw cover and remove the 2 screws under it.

Step 9

- Remove the Diopter adjustment control sticker and remove the screw under it.

Step 10

- Separate the back panel of the camera from the actual camera.
- ⚠ Be careful not to tear any of the ribbon cables.

Step 11

- Disconnect the LCD ribbon cables and power cable from the motherboard.

Step 12

- Unscrew all 16 screws around the back plate of the camera.

Step 13

- Then unscrew the remaining screws holding the back plate to the LCD.
- Then simply remove the plate with the LCD.

To reassemble your device, follow these instructions in reverse order.
