

Ninja Mega Kitchen System BL770 LED Light Replacement

How to replace LED lights in the Ninja Mega Kitchen System BL770.

Written By: Tommee Walker

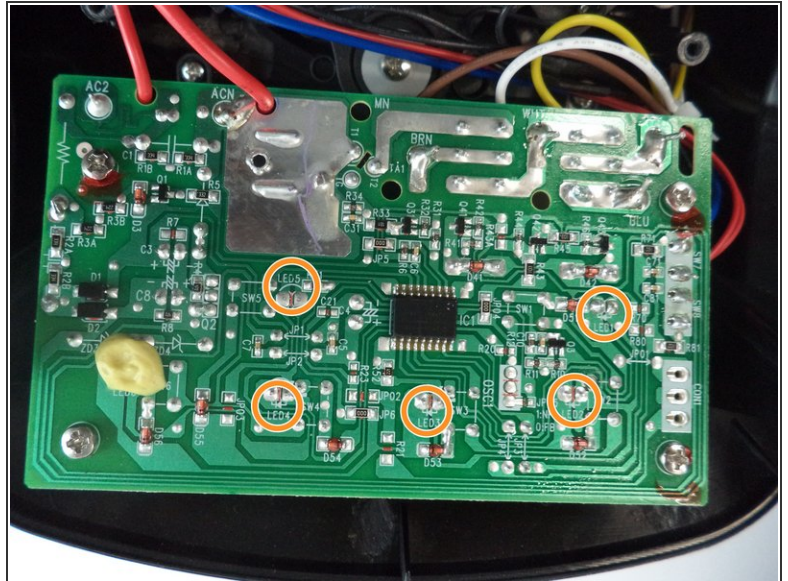

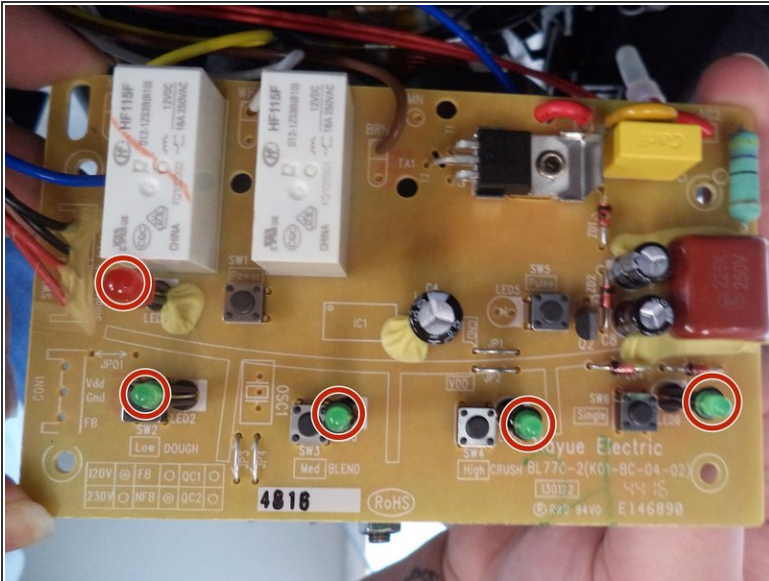

INTRODUCTION

If you notice the LED lights on your device are continuously blinking or not working at all, this step-by-step guide will show you how to replace them individually, or all together. For soldering help, follow the [How to Solder and Desolder Connections](#) guide.

TOOLS:

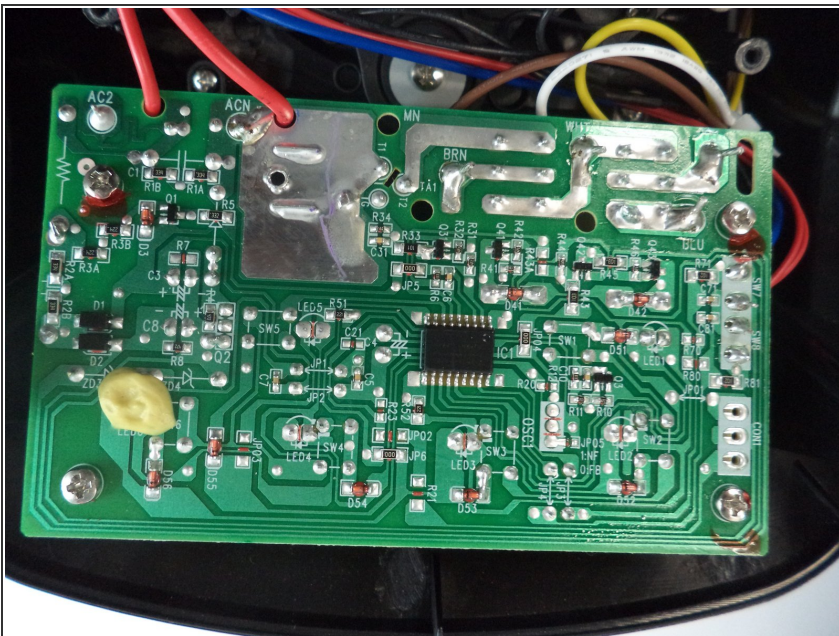

- [Phillips #2 Screwdriver](#) (1)
 - [Soldering Iron](#) (1)
 - [T10 Torx Screwdriver](#) (1)
-

Step 1 — LED Light

- On the circuit board, locate the LED light you wish to replace.
- On the bottom of the board, each LED is designated with a small triangle with a line at one tip and a label of LED1, LED2, etc.

Step 2

- Desolder the two LED leads to the specific bulb.
- Remove the LED from the circuit board.
- Properly install the new LED and solder to the board.

To reassemble your device, follow these instructions in reverse order.
