

Nintendo DS Lite Teardown

This guide will show you how to tear down a Nintendo DS Lite.

Written By: Isabella Sandoval

INTRODUCTION

This guide will show you how to tear down a Nintendo DS Lite.

TOOLS:

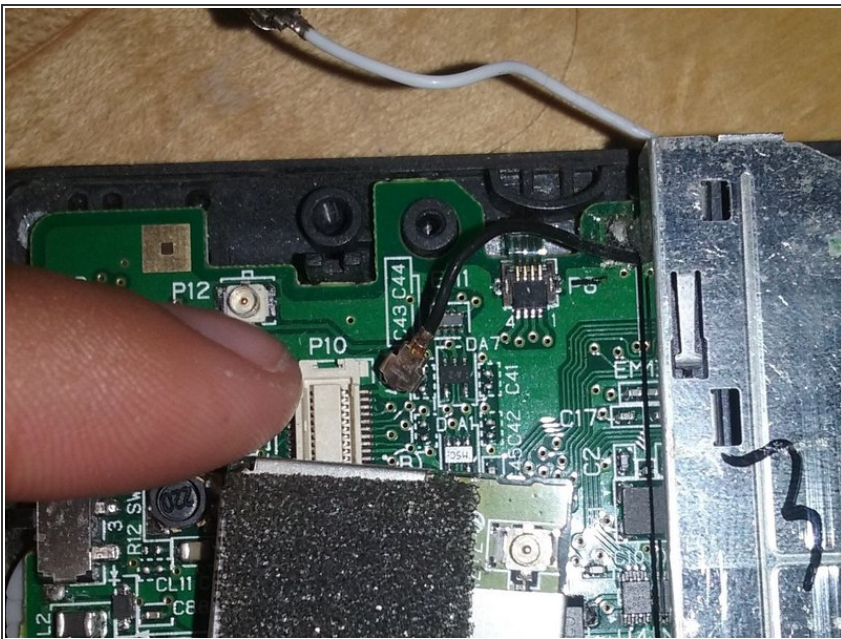

- [Mako Driver Kit - 64 Precision Bits](#) (1)
 - [Spudger](#) (1)
-

Step 1 — Part Separation

- Your first step would be to unscrew all all screws on the back and take the case off. You take the case off by placing a spudger on the line edges , and then place it inward, forcing it to separate the two parts.

Step 2 — WI-FI board

- You first remove the gables by gently pulling them and do the same for the WI-FI board

Step 3 — Screen Removal

- You take the mother board off by flipping the upside-down and the screen should pop right off.

Step 4

- Unscrew and gently slide wires through frame

Step 5 — Final Look

- The DS should look like this and to put the DS back together simply follow steps back wards.
