### TOOLS:

- [Y1 Tri-point Screwdriver](#) (1)
  - [Tweezers](#) (1)
  - [Spudger](#) (1)
-

## Step 1 — Batteries

- Pull down on the battery cover release lever and pull back to remove the cover.

## Step 2

- Take out each battery then put the covering back on.

### Step 3 — Front Panel

- Remove the eight 9-mm Tri-Wing screws on the back panel with the Tri-wing Y1 screwdriver.
- ⓘ During reassembly, firmly hold the panels of the controller together while replacing screws so the panels don't separate.

## Step 4

- After each screws has been removed carefully turn over the controller, and place on a flat surface.
- Slowly separate the top panel from the bottom panel.
- ✦ The buttons are loose and may fall off of the motherboard.
- Once seperarted set aside the top panel.
- ⓘ During reassembly, make sure the front panel lines up with the buttons so they slide back into place.

## Step 5 — Buttons

- Use tweezers to remove the buttons.

 It may be easier to remove the A button off of the pad by lifting it with your fingers.

 During reassembly, make sure all buttons are in their respective sockets so they match up with the front panel.

## Step 6 — C-Stick

-  Rough handling of the C-stick could cause the daughter board to break off of the motherboard.
- Grab the base of the yellow C-Stick cover with one hand and gently hold down the bottom piece of the motherboard with the spudger.
  - Pull off the yellow C-Stick cover.
-  During reassembly, make sure the slots inside the C-Stick cover line up with the motherboard so it can fit back together.

To reassemble your device, follow these instructions in reverse order.
