- Remove the battery cover.

Step 2

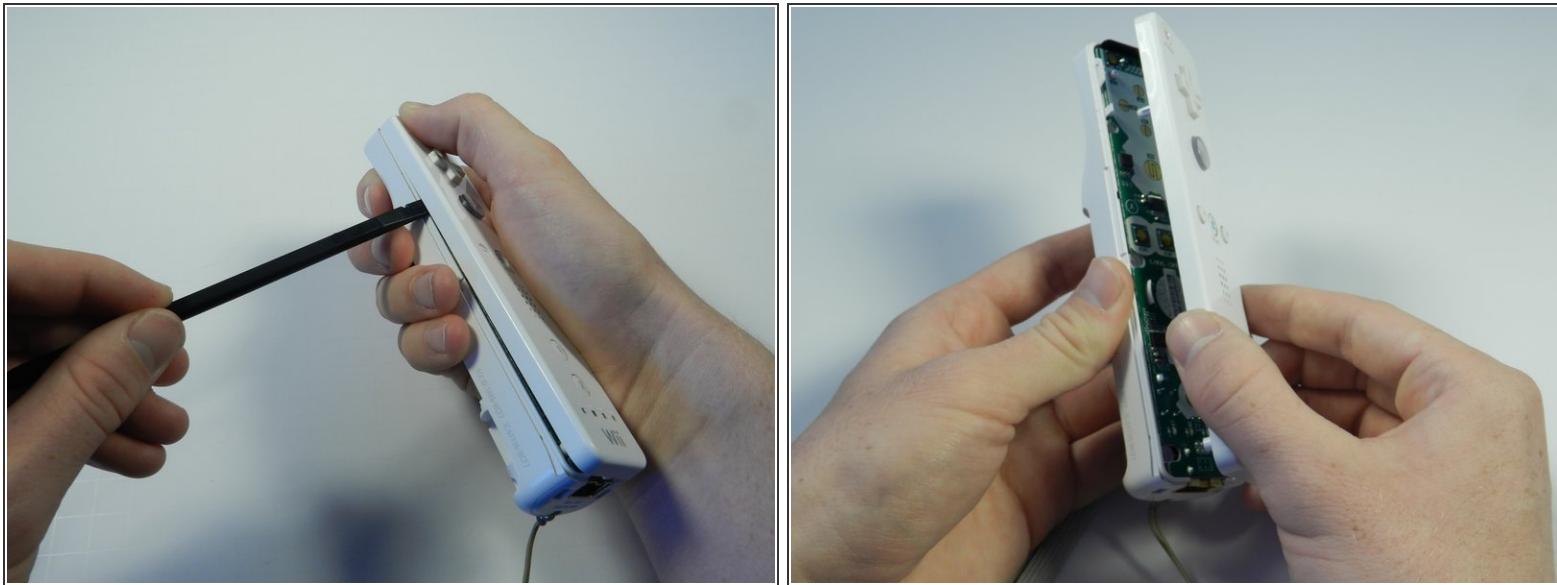

- Remove the first battery by pressing down on the positive end and pulling the battery out.
- Remove the second battery by pushing up on the positive end and pulling the battery out.

Step 3

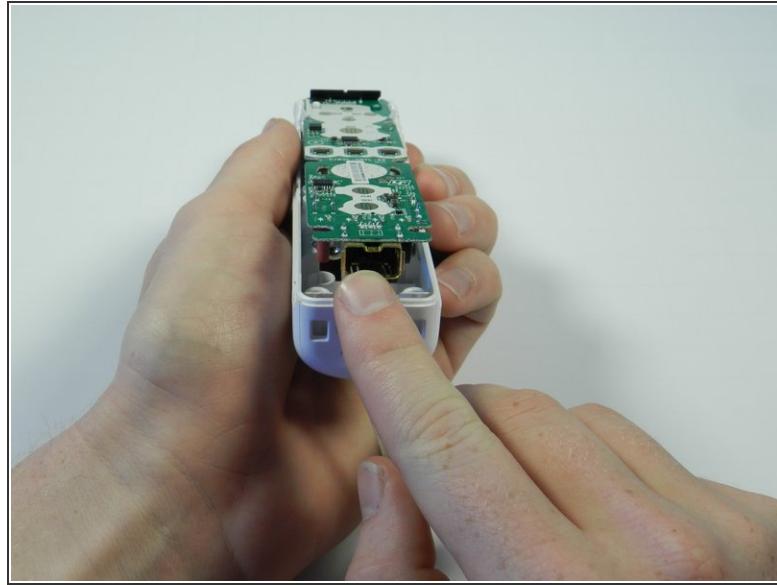

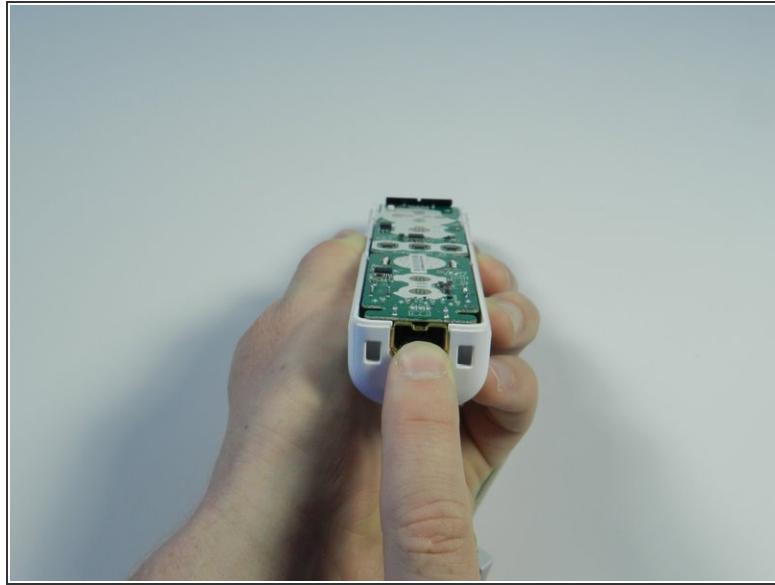

- Using a tri-point Y1 Screwdriver, remove the two center 7mm screws by turning them counterclockwise.
- Repeat with the two bottom screws.

Step 4

- With the flat end of a spudger, gently apply pressure to the tabs located on left side of the controller.
 - ⓘ These tabs are breakable. However, if the tabs are broken the controller will still function.
- Open the front plate like a book.
 - ⚠ Small parts may fall out as you open the front plate.

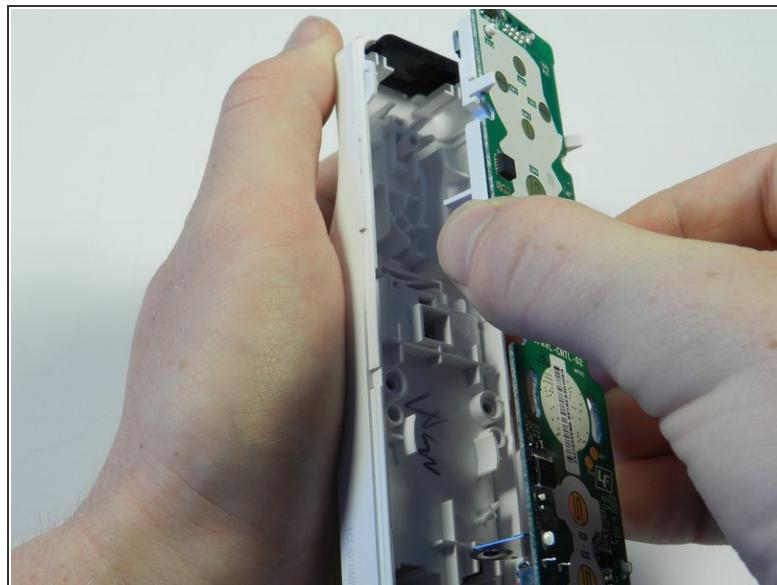

Step 5 — Motherboard

- Using the connector port, gently lift the motherboard about 2 cm from the base.

⚠ Electrostatic discharge may damage the device. Be careful and avoid touching the electronic components as much as possible.

Step 6

- Grasp the edges of the motherboard and pull it straight away from the case.

To reassemble your device, follow these instructions in reverse order.
