

# Nokia Lumia 1020 Rear-Facing Camera Replacement

This guide explains how to replace the Nokia Lumia 1020's rear-facing camera.

Written By: Sydney Hostelley

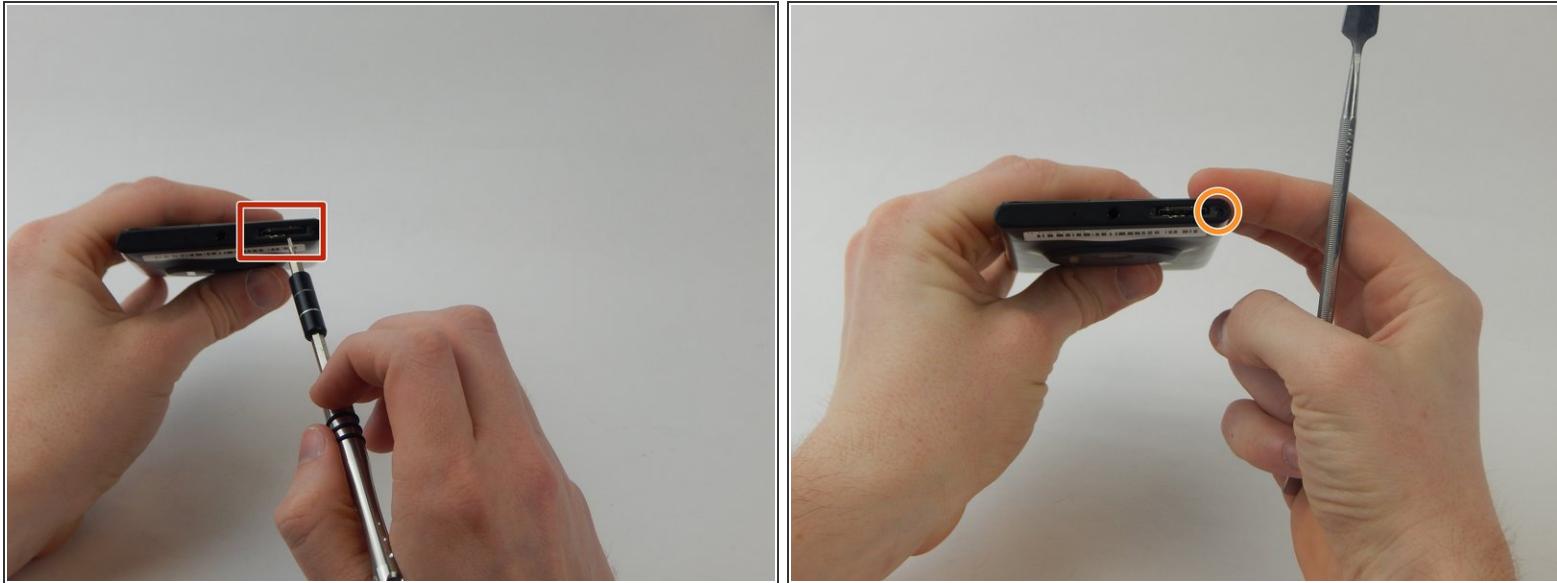

## INTRODUCTION

Replacing the rear-facing camera of the Nokia Lumia 1020 requires removal of the phone's screen.

### TOOLS:

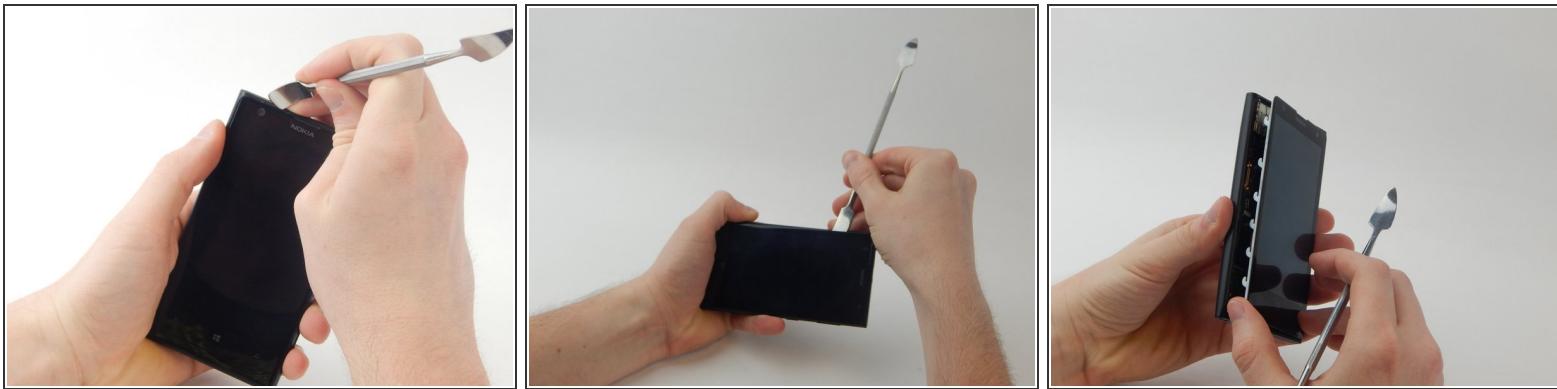

- [T4 Torx Screwdriver](#) (1)
- [T6 Torx Screwdriver](#) (1)
- [ESD Safe Tweezers Blunt Nose](#) (1)
- [Spudger](#) (1)

## Step 1 — Screen

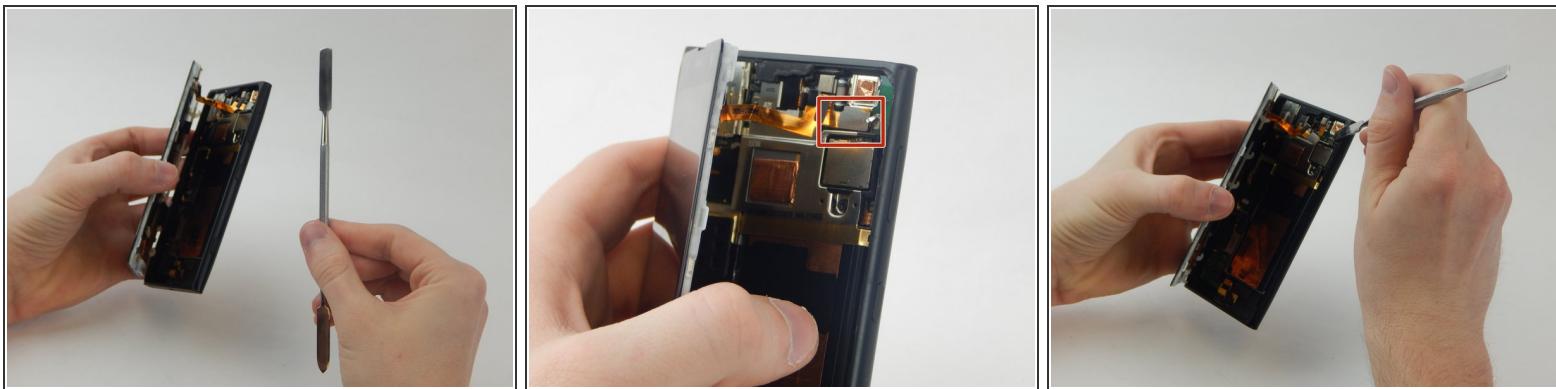

- Use a SIM door key to remove the SIM card and SIM card tray from the device.
- Use a T4 screwdriver to loosen the captured torx screw to the right of the SIM card tray (the screw will not come out).

## Step 2

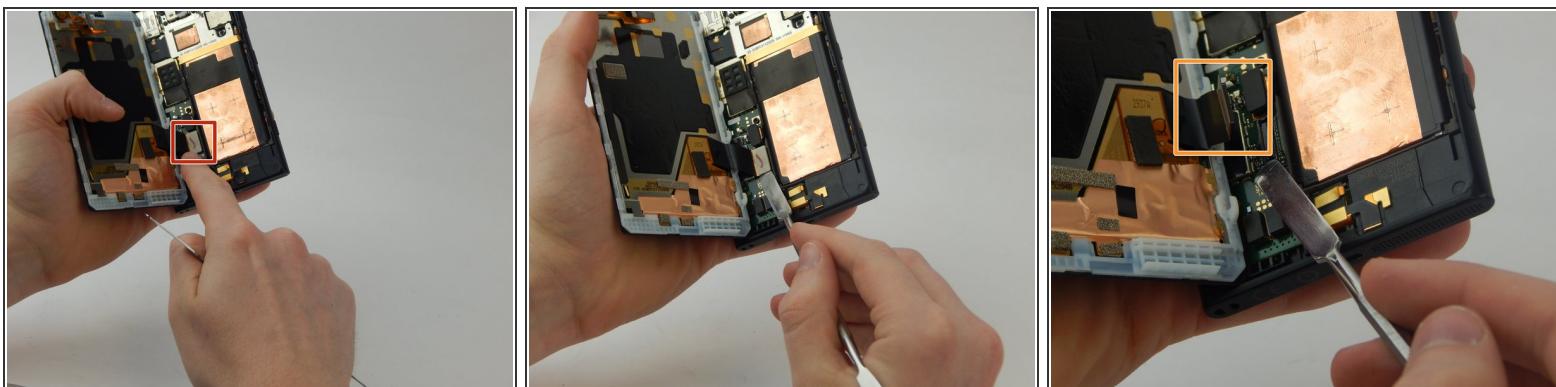

- Wedge a spudger in between the screen and the back of the device, starting from the top left corner of the phone.
- Gently pry the screen away from the back of the device using slight upward pressure.
- Slide the spudger down towards the bottom left corner of the device, continuing to gently pry upwards. The screen will now be slightly separated from the back of the phone.

## Step 3

- Wedge a spudger underneath the silver rectangle in the upper right corner until it pops off the back of the phone.

## Step 4

- Wedge a spudger underneath the silver rectangle in the lower left corner until it pops off the back of the phone.
- Completely remove the screen from the back of the phone.

## Step 5 — Rear-Facing Camera

- Use your fingernail to grip the rear-facing camera on the upper middle part of the back of the phone. Pry until it pops off to the left.
- Remove the camera by wedging a spudger underneath the attached gold foil.

To reassemble your device, follow these instructions in reverse order.
