Step 1 — Remove the front frame

- Wedge the plastic opening piece underneath the bottom left hand corner of the front frame. Pry the frame off of the Nook.

Step 2 — Remove the screws

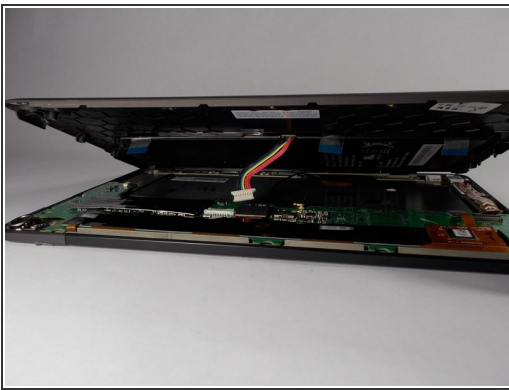

- Remove every visible screw tying the chassis to the bottom frame using the T-4 attachment for the screwdriver in the iFixit screwdriver kit.

Step 3 — Remove the chassis

- Carefully remove center chassis from bottom frame.

Step 4 — Detach battery

- Detach the battery ribbon from the motherboard.

Step 5 — Remove the battery

- Pry battery off of bottom frame using plastic opening tool.

Step 6 — Place new battery

- Apply glue to the bottom side of new battery. Re-insert new battery onto bottom frame and allow to dry.
