 - It is not necessary to remove the battery to replace the display. Move on to Step 11.
 - Use the screwdriver or plastic prying tool around the edges of the battery to pry it from its slot in the metal backing.
- ⚠ The battery may be held with adhesive. Do not panic if it feels like you are prying too hard just apply some force until it is no longer stuck.
- Pick up the battery and remove it making sure to free the cords in the upper left hand corner by sliding it out rather than lifting it.

Step 12 — Notes for Reassembly

 When replacing the motherboard make sure that the speaker assembly component (small rectangular piece) is in place. It is not attached and needs to be properly aligned.

To reassemble your device, follow these instructions in reverse order.
