INTRODUCTION

The hard drive can be replaced if the user wants to upgrade with a hard drive with more memory. It will also need to be replaced if the memory in the current hard drive becomes corrupted.

TOOLS:

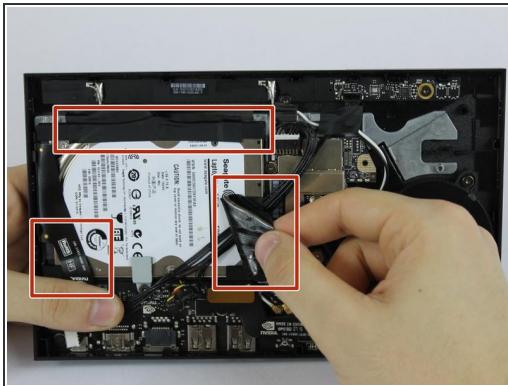

- [iFixit Opening Tools](#) (1)
- [T6 Torx Screwdriver](#) (1)

Step 1 — Hard Drive

- Flip the device over and use a plastic opening tool to remove the bottom cover.

Step 2

- Remove the tape that is covering the hard drive.

ⓘ Place tape aside in a safe place so it can be reused to secure the hard drive when reassembling.

Step 3

- Remove the indicated screw using the T6 Torx Screwdriver.

Step 4

- Gently pull out the hard drive.
- Remove the connector pins from the hard drive.

To reassemble your device, follow these instructions in reverse order.
