 - 1-The center of the board, above the central hole.
 - With metal tweezers, remove the two white plastic clips from their sockets one on the base of the board and the other on the surface.
-  The bullets apply to the three pictures on the step.

Step 5

- Remove the single 3mm ground screw attached to the camera body

Step 6

- The mother board has two solder connections that need to be undone to remove the board
- ⚠ Don't attempt to unsolder the joints without previous knowledge of soldering
- ⚠ When soldering avoiding touching any other components with the iron

Step 7

- Once we have the mother board removed it can be replaced with a new board.
- ⓘ While the mother board is removed it is possible to get further into the camera itself to make more repairs.
