INTRODUCTION

Step by step instructions to clean or replace the control buttons on the camera.

TOOLS:

- [Phillips #00 Screwdriver](#) (1)
- [iFixit Opening Tools](#) (1)

Step 1 — Rear Panel Control Buttons

(i) Before disassembling your camera, be sure it is powered off.

- Remove two screws from the video port located at the side panel of the camera.
- Remove three screws from the bottom panel of the camera.

Step 2

- Open the USB port cover, and remove three screws from inside.
- Next, open the memory slot cover and remove the screw.

Step 3

- Use the blue opening tool to loosen and separate the back cover from the camera.

Step 4

- Locate and unscrew the three screws inside the back cover body (picture 3) .
- Remove button pad assembly from the back cover.

Step 5

(i) The button assembly is now separate from the back cover.

- Inspect for broken areas. Replace or clean the button parts.

To reassemble your device, follow these instructions in reverse order.
