

# Olympus D590 Backplate Replacement

Written By: Katie

## INTRODUCTION

The guide shows how to remove the backplate of the camera. It is a prerequisite to other guides such as replacing the mic, speaker, LCD screen, and lens.

### TOOLS:

- [Phillips #00 Screwdriver](#) (1)
- [Flathead 3/32" or 2.5 mm Screwdriver](#) (1)
- [iFixit Opening Tools](#) (1)

## Step 1 — Face Plate

- Flip camera so you are looking at the bottom.
- Unscrew all 5 base plate screws.

## Step 2

- Lift open retainer clip by sliding the clip to the left and letting the clip pop up.

## Step 3

- Unscrew the single screw located next to the battery slot.

## Step 4

- Turn the camera so that the USB, AV and DC in/out rubber plate it facing you.
- Lift the rubber plate exposing the ports beneath.

## Step 5

- Unscrew the 2 screws next to the USB and AC ports.

## Step 6

- Use a flathead screwdriver or another flat opening tool to pry the faceplate from the whole device.

## Step 7

- Pull off the faceplate to reveal the inside of the camera.

⚠ Be careful of the connector that goes from the faceplate to the motherboard. Disconnecting this line will cause the camera not power on through the on/off switch anymore.

## Step 8 — Backplate

- Use a phillips head screwdriver to remove the 3 screws highlighted in the picture.

## Step 9

- Unscrew the 2 screws located on either side of the flash.

## Step 10

- Get a flathead screwdriver or an iPod opening tool (both are shown in this picture).
- Carefully pry off the blackplate from the remaining part of the camera.

## Step 11

- Pull the backplate off.

To reassemble your device, follow these instructions in reverse order.
