## INTRODUCTION

Before removing the LCD screen you must first remove the rear camera casing.

### TOOLS:

- [Phillips #00 Screwdriver](#) (1)
- [Spudger](#) (1)

## Step 1 — Battery

- The battery compartment is located on the bottom side of the camera. Push the button in, and slide the cover to get access to the batteries.

## Step 2

- The batteries will slide right out.
- ★ When putting new batteries in, make sure they are pointing the right direction.

## Step 3 — Front Casing

- Remove the 7 screws holding the front case in place, with a #00 screwdriver.
  - Six screws are 3.6 mm.
  - The seventh screw is 3.2 mm.

## Step 4

- Pulling the front case off, requires applying enough strength in the right areas.
- The front case snaps into place in three places:
  - At the top and bottom of the battery side (opposite of side pictured) of the case.
  - Right in the middle of the DC-in side (side pictured) of the case.
  - Top of the camera, to the left of the power button.
- Once those places are disconnected, the front case will pop right off.

**i** The camera in the first two pictures is upside down. This is the best position to place your thumbs to remove the case.

## Step 5 — Rear Casing

- Remove the 3.2 mm screw in the battery compartment using a #00 screwdriver.

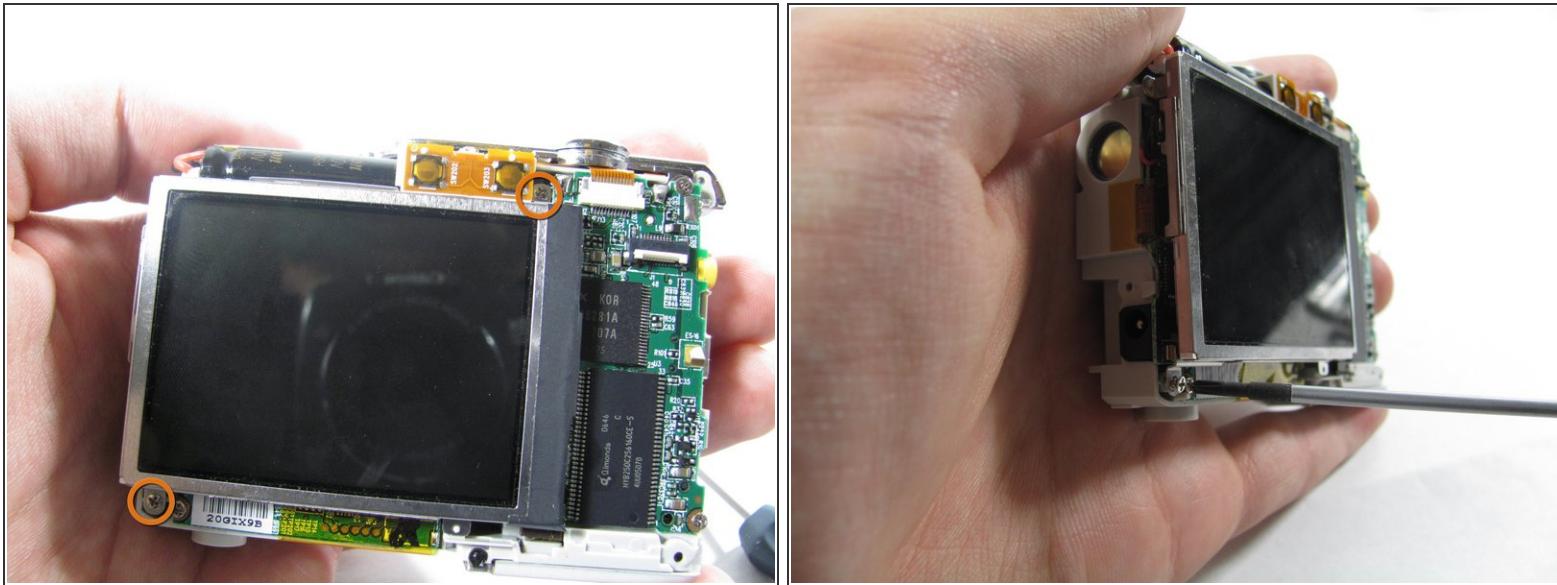

**⚠** After removal of the screw the case will be loose, but do not tug it off. There is a cord connecting the rear controls to the motherboard.

## Step 6

- Carefully pull the rear case away from the camera until you have access to the cord connected to the motherboard.
- Lift the white latch using a fingernail or a spudger.
- Pull the cord from its connector.

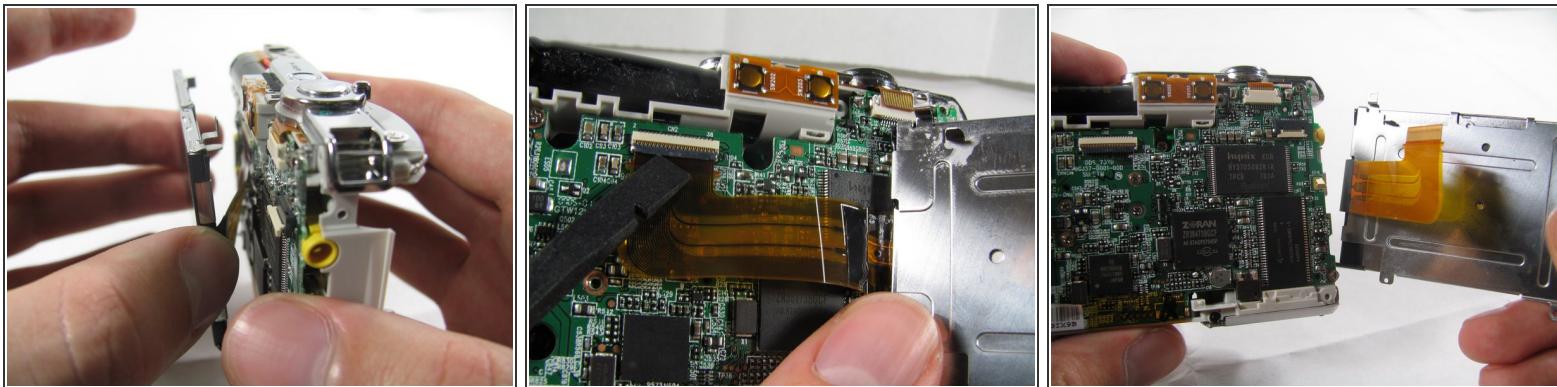

## Step 7 — LCD Screen

- Remove the two 2.7 mm screws using a #00 screwdriver.

**⚠** After removing the screws the display will be free. Do not remove it. Like the rear case, there is a cord connecting it to the motherboard that must be disconnected first.

## Step 8

- Using a spudger, lift the latch on the connector.
- Remove the ribbon cord from its connector.
- Remove the LCD from the rest of the camera.

To reassemble your device, follow these instructions in reverse order.
