INTRODUCTION

Is your LCD Screen cracked or unresponsive? Use this guide to replace it and get back to taking awesome photos.

We highly suggest you use a [magnetic project mat](#) or an [organization tray](#). This camera has **many** different types of screws and keeping them organized is key to proper reassembly.

TOOLS:

- [Tweezers](#) (1)
- [Phillips #00 Screwdriver](#) (1)
- [Magnetic Project Mat](#) (1)

Step 1 — Battery

- Turn the camera upside down.
- Push the grey tab to the right to open the battery compartment.
- Pull out the battery.

(i) The battery is not shown in these photos.

Step 2 — LCD Screen

- Use a Phillips #00 screwdriver to remove the three 2.3 mm screws from the base of the LCD screen.

Step 3

- Fully extend the LCD assembly.

Step 4

- Remove the two 2.2 mm Phillips screws located on the back of the LCD screen.
- Use tweezers to remove the top LCD bracket.

Step 5

- Use a Phillips #00 screwdriver to remove the four 1.4 mm screws from the back of the LCD screen.
- Remove the LCD ribbon cable with a pair of tweezers.

(i) The cover may fall off after the screws have been removed.

Step 6

- Carefully lift the LCD screen up and away from the assembly.

 Do not attempt to fully remove the screen, as it is attached to the assembly by a ribbon cable.

Step 7

- Use tweezers to peel back the plastic cover.

Step 8

- Use a spudger to flip back the black bar on the LCD Ribbon ZIF connector.

Step 9

- Gently pull the ribbon cable out with tweezers.

Step 10

- Remove the LCD Screen.

To reassemble your device, follow these instructions in reverse order.
