## INTRODUCTION

A faulty or defective front control panel may cause buttons on the media receiver to be unresponsive. Replacing the circuit board should resolve issues with the front controls and buttons.

### TOOLS:

- [Phillips #1 Screwdriver \(1\)](#)
- [iFixit Opening Tools \(1\)](#)

## Step 1 — Control Panel Circuit Board

- Remove the two 6.4 mm Phillips screws on each side of the device's casing.

## Step 2

- Remove the two 6.5 mm Phillips screws on the back of the device casing.

## Step 3

- Grip the front panel in one hand and the back of the casing in the other. Pull the casing back, and slide it up and away from the inner box.

## Step 4

- Unlatch the three plastic connectors on the top of the receiver that hold the front panel to the device casing.

## Step 5

- ⓘ The connectors on the bottom of the device may be very stiff and could require the use of a plastic prying tool.
- Carefully flip the device over and unlatch the three plastic connectors that hold the front panel to the bottom of the device casing.

## Step 6

- Grip and unplug the ribbon connector that connects the front circuit board to the device.

## Step 7

- Unscrew the three 1/4 Phillips head screws on the back of the front circuit board.

## Step 8

- Grip the circuit board and slide towards the front side of the plastic casing.
- Lift upwards to remove the circuit board from the front panel.

To reassemble your device, follow these instructions in reverse order.
