INTRODUCTION

The power is the most common issue with the Polaroid S10. This guide will show you how to replace the battery.

TOOLS:

- [Metal Spudger Set](#) (1)
- [iFixit Opening Picks set of 6](#) (1)
- [Soldering Iron](#) (1)
- [Spudger](#) (1)

PARTS:

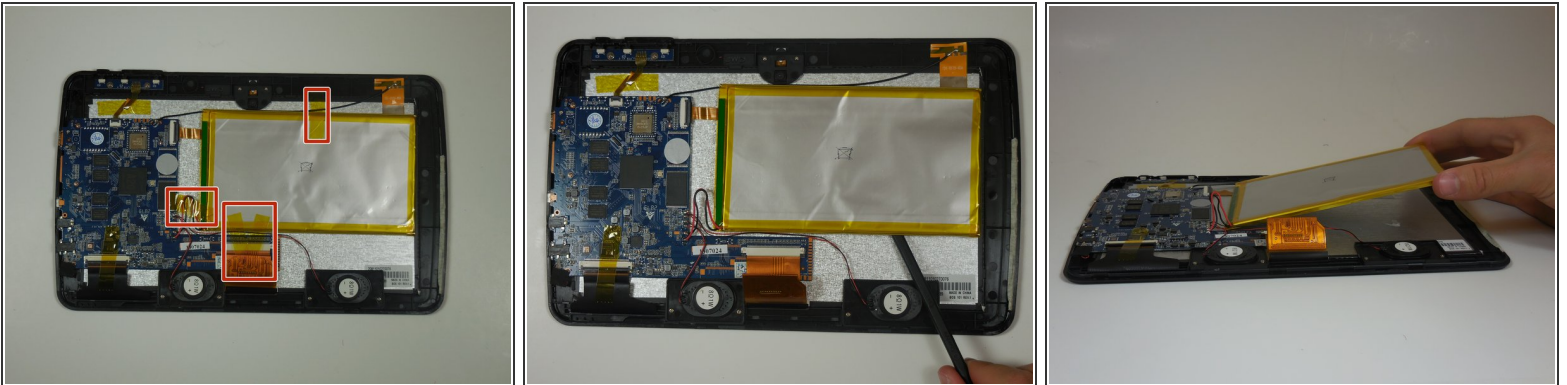

- [Polyimide Tape](#) (1)

Step 1 — Removing the backcover

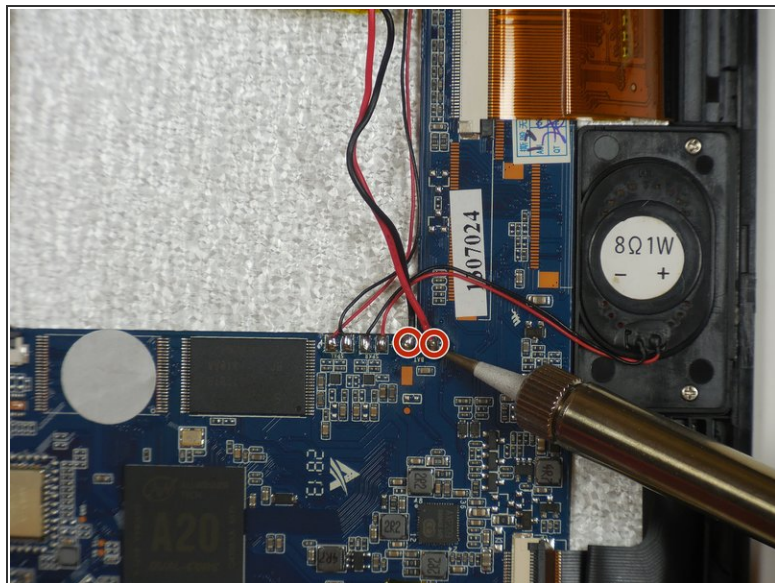

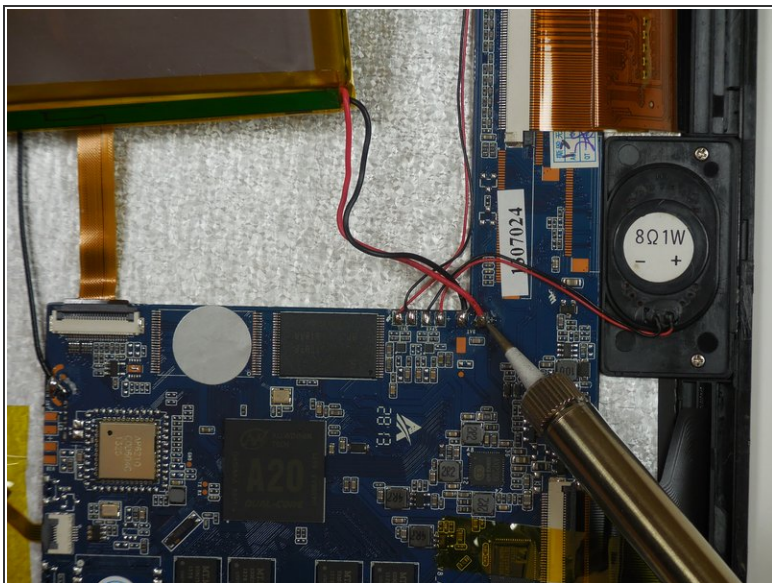

- Place an opening pick between the volume button and the back cover.
- ⓘ More than one pick may be needed, but avoid placing more than two picks in the same space.
- ⚠ Excessive force on the pick will break the volume button.
- Carefully remove the back cover using the metal spudger.
- ⓘ It is normal to hear a snapping noise due to the plastic tabs on the back cover.

Step 2 — Battery

- Use a spudger to carefully remove the tape nearest to the battery.
- ⚠ Use caution while removing tape. Too much force can damage the device.
- Gently use the spudger to remove the battery out of place by wedging it out from the bottom.
- ⚠ Do not move the battery. Moving it could cause the cables to be ripped out.

Step 3 — Battery Connection

- Carefully desolder the 2 wires that connect the battery to the motherboard.

⚠ Do not touch the soldering iron to the motherboard or the LCD screen.

Follow these instructions to reassemble your device.
