

Protocol Dronium Two Blade Guard Replacement

This guide is for replacing the blade guard on the Protocol Dronium Two

Written By: Edwin Brietz

INTRODUCTION

This guide shows how to remove the blade guard on the Protocol Dronium Two. The only tool you will need is the #0 Phillips screwdriver. The screwdriver is also included in the box of your drone. Perform this repair in a clean and well lit area so that you don't lose the screw.

TOOLS:

- Phillips #0 Screwdriver (1)

PARTS:

- Blade Guard (1)

Step 1 — Blade Guard

- Turn the drone off by moving the selector switch to the left.

Step 2

- Using your screwdriver, remove the 8.36mm Phillips screw.

Step 3

- While holding the drone with one hand, gently lift the blade guard straight up and remove it.

⚠ Be careful not to break off the two studs holding the blade guard in place.

To reassemble your device, follow these instructions in reverse order.
