# RCX 1.0 Batteries Replacement

How to remove and replace the batteries in any RCX (not just 1.0).
Written By: notexactly

INTRODUCTION
When your RCX runs out of battery power, you'll need to put in new batteries.
Step 1 — Batteries

- Place the RCX on a flat surface.

Step 2

- Flip the RCX over so its black IR window is facing away from you.

Step 3

- Remove the gray battery cover by lifting from the front (near the IR window). Raise it at an angle and remove it to reveal the green battery compartment.

- You can now remove the batteries and insert new ones.

To reassemble your device, follow these instructions in reverse order. The orientation of the gray battery cover doesn't matter.
