

RIDGID Belt Sander R2740 On/Off Switch Replacement

How to replace a RIDGID Belt Sander R2740 On/Off Switch.

Written By: Auddie Reynolds

INTRODUCTION

If your RIDGID R2740 Belt Sander won't turn on, the on/off switch may be defective and need to be replaced. This guide will walk you through how to replace the on/off switch on your RIDGID R2740 Belt Sander.

TOOLS:

- [T20 Torx Screwdriver](#) (1)
- [T10 Torx Screwdriver](#) (1)
- [Phillips #3 Screwdriver](#) (1)

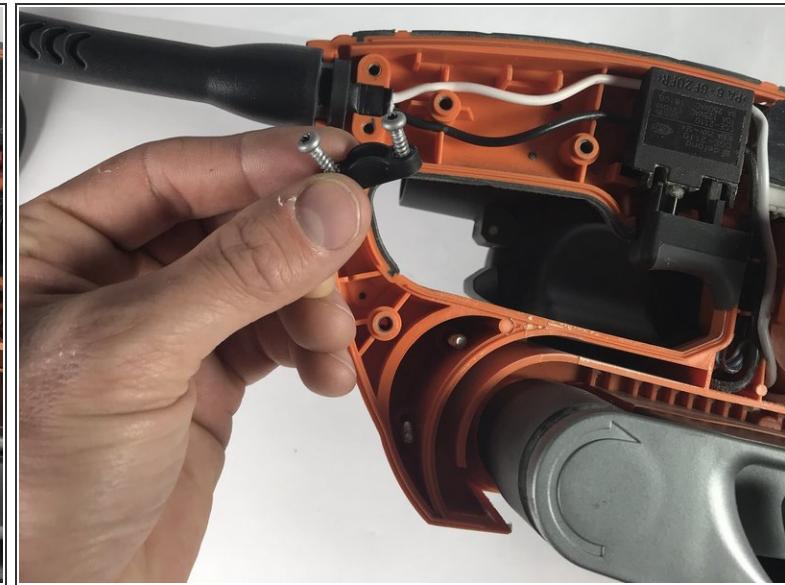

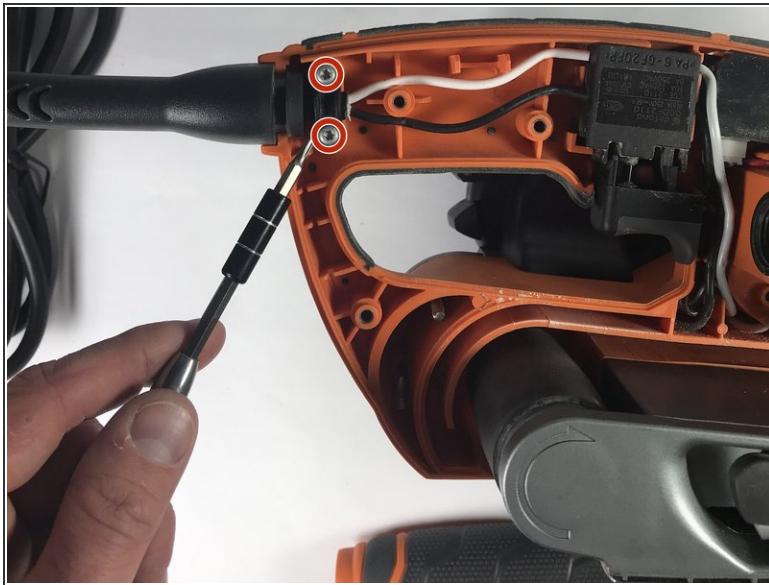

Step 1 — Power Cord

- Orient the belt sander so that the RIDGID logo is facing you.
- Remove the six 19 mm and three 51 mm T20 screws that hold the cover into place.
- Remove the cover from the belt sander.

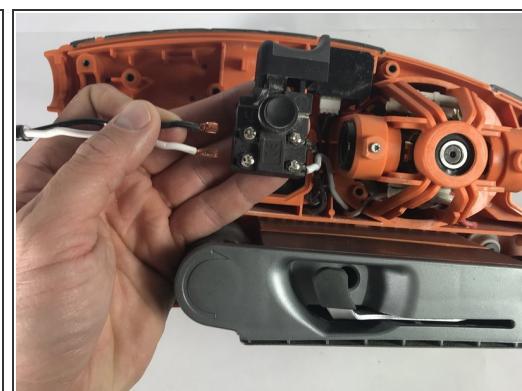

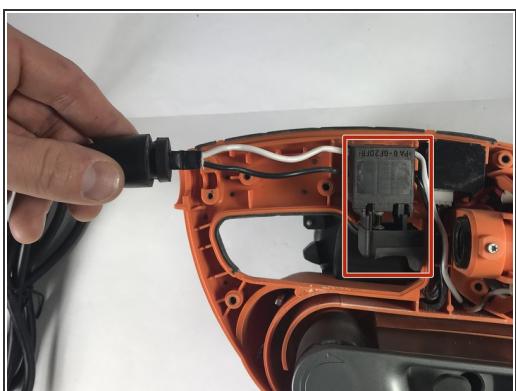

i Make sure you remember the correct placement of each screw.

Step 2

- Remove the two 16 mm T10 screws.
- Remove the support bracket that holds the power cord into place.

Step 3

- Lift the power cord from the resting grooves.
- Rotate the switch so that the lock-on button is facing you.
- Loosen the two 8 mm Phillips #3 screws.
- Pull the two wires away from the switch.

Step 4 — On/Off Switch

- Undo the two screws on the backside of the switch with a Phillips #3 screw driver.

Step 5

- Pull out the wires from the switch.

To reassemble your device, follow these instructions in reverse order.
