

RIDGID R32104 Motor Brush Replacement

Use this guide to replace the motor brush in your RIDGID R32104.

Written By: Lucas Pimentel

INTRODUCTION

There are many issues that can be caused by a faulty motor brush. If you begin to hear banging sounds coming from the motor, this could be caused by the motor brush. Fortunately, a motor brush is one of the easiest parts to replace due to its accessibility. All you need is a standard flathead screwdriver to remove a cap.

TOOLS:

- [Flathead Screwdriver \(1\)](#)

Step 1 — Motor Brush

 Turn off your saw and unplug before starting.

- Place down the Worm Drive Saw on a sturdy surface.
- The motor brush cap is located on the side of the main housing assembly, it can be identified as a large black plastic cap with a slit running down its surface.

Step 2

- Using a flathead screwdriver, remove the motor brush cap from the main housing assembly.

Step 3

- With the cap removed, the motor brush should now be accessible.
- Carefully remove the motor brush by sliding it out of the main housing assembly.

To reassemble your device, follow these instructions in reverse order.
