Step 1 — RJ45 Ethernet port cover

- Remove the power supply
- Flip the laptop with the back to the top
- Remove the screws of the back cover
- Move the cover a bit to the back
 - and remove it to the top
- Remove the 2 screws from the ethernet plastic door
- Remove the defective RJ45 cover
- Set the spare part in its place and apply the 2 screws

Reassemble the laptop by putting the back cover back in place.
