INTRODUCTION

The back panel is the "lid" that covers many of the monitors electrical components. Therefore this is a prerequisite for most of the other repair guides on this device.

TOOLS:

- Phillips #1 Screwdriver (1)
- Heavy-Duty Spudger (1)

Step 1 — Back Panel

- Use the #1 Phillips head screw driver to remove each 13.75mm length screw from the rear panel.

The screw alone with the ports is a different size than the rest, its length is 12mm.

Step 2

- Insert the heavy duty spudger in between the monitors back panel and its frame.
- Use the heavy duty spudger to pry open the back panel.

Over aggressive prying could break the tabs holding the back panel in place.

To reassemble your device, follow these instructions in reverse order.
