

# Samsung BD-F5700 Disc Reader Replacement

The following guide will show how to open the device and remove the disc reader.

Written By: Livan Perez

## INTRODUCTION

This guide will show how the replacement of the disk reader is done.

### TOOLS:

- [Phillips #0 Screwdriver \(1\)](#)
- [Phillips #1 Screwdriver \(1\)](#)
- [iFixit Opening Tools \(1\)](#)

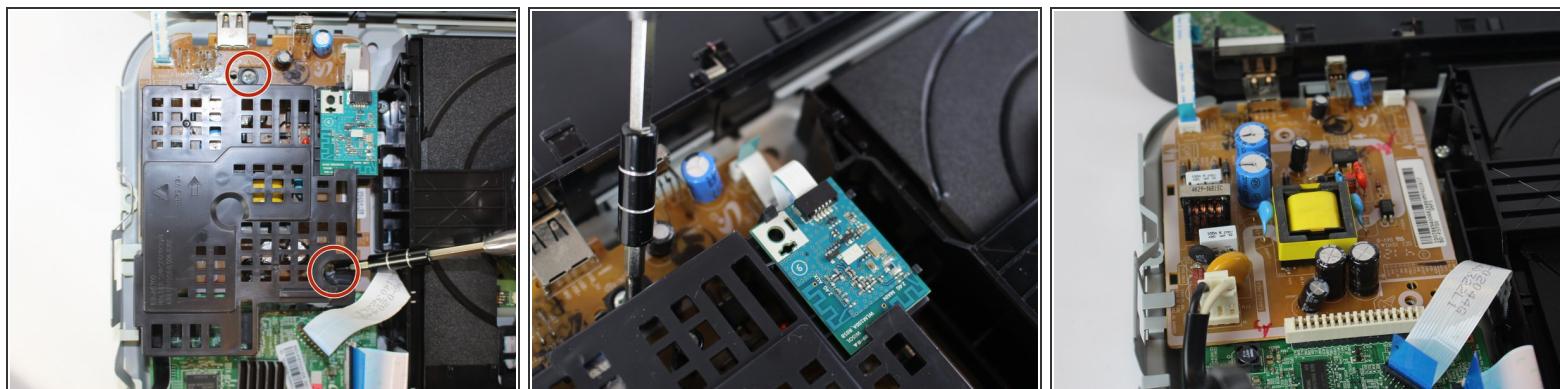

## Step 1 — Power Cord

- Use Phillips 0 Screwdriver to remove two (2) 10 mm rear screws.
- Use a plastic prying tool to help separate the top plastic casing from the bottom metal casing.

 When opening the device, pay attention to the ribbon cable circled in image 3.

## Step 2

- Use Phillips 0 screwdriver to remove two (2) 10 mm screws from the plastic cover
- Remove plastic cover from board.

## Step 3

- Pull up on back of wire to dislocate black tab piece from device.
- To remove the cord from the device entirely, press on the white tab in the device and gently pull.

## Step 4

- Insert plastic prying tool into black tab on power cord, and use leverage to open the black tab.
- Pull the tab off the wire so that it can be placed on the replacement cord.

## Step 5 — Disc Reader

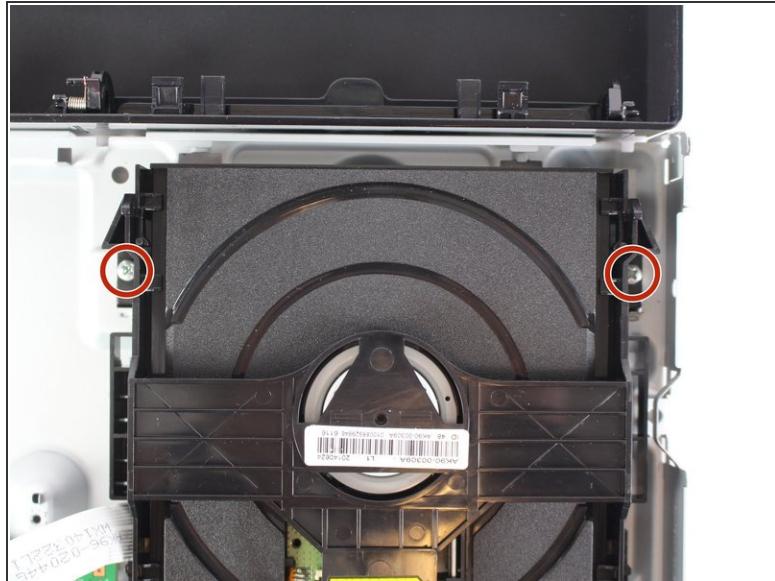

- Remove the two 10mm screws with a Phillips #1 screwdriver.
- Separate the two pieces with a plastic opening tool.

## Step 6

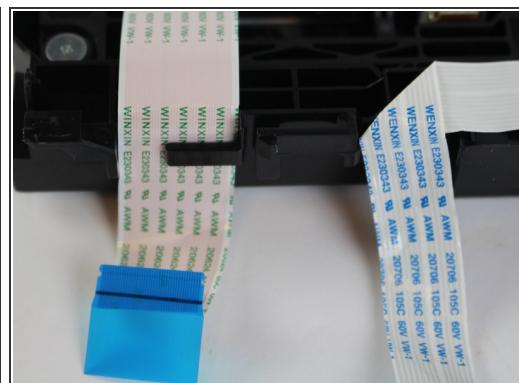

- firmly grip the hard plastic tab attached to the base and pull upwards. It is important no to tear the ribbon cables.

## Step 7

- Remove the two 7mm screws with a Phillips #1 screwdriver.

## Step 8

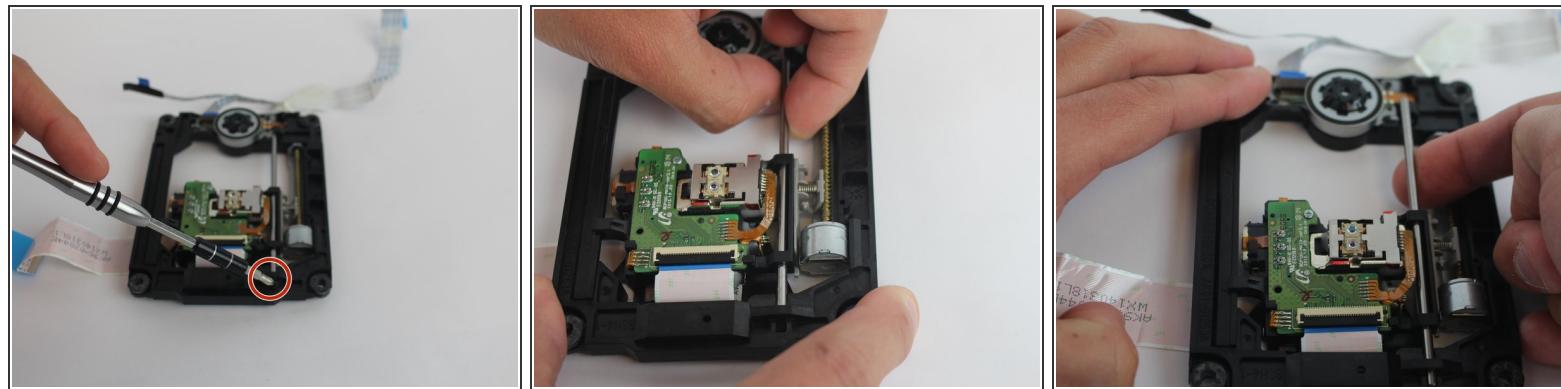

- Pinch both tabs on the side of the disc tray, push towards the front, and lift the disc tray out to remove.

## Step 9

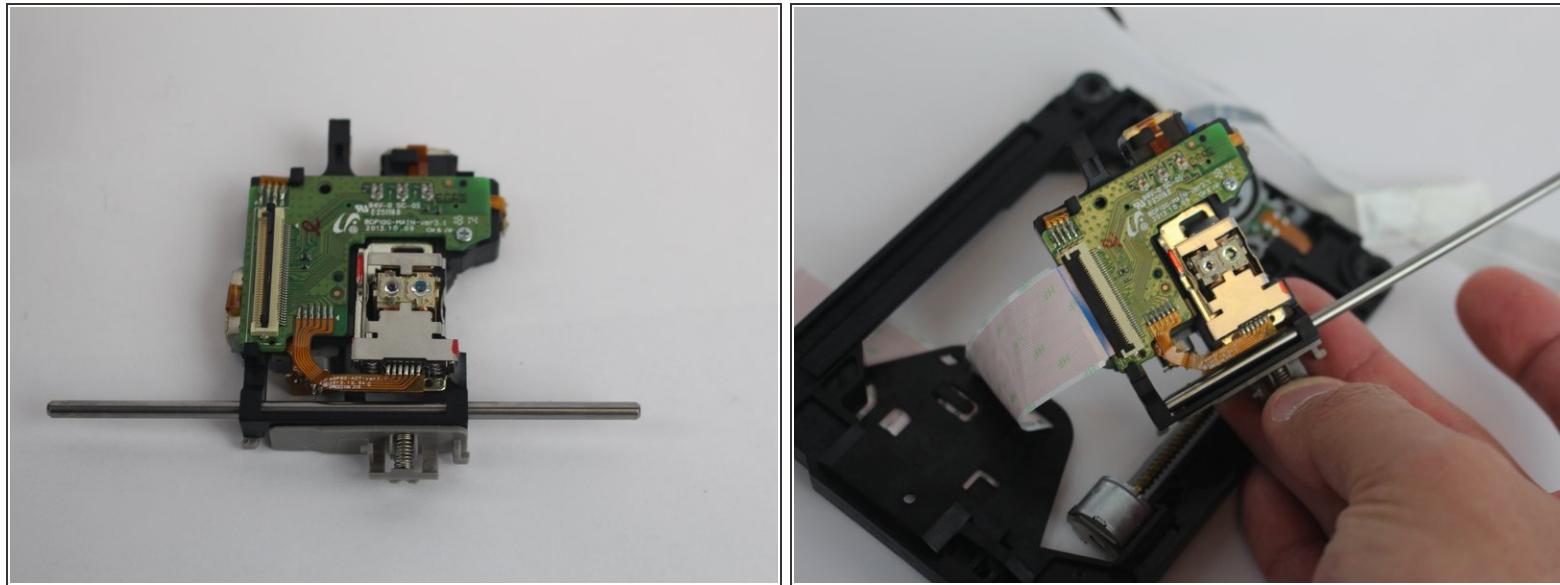

- Flip up the black locking tab on the ZIF connector.

## Step 10

- Remove the 10 mm screw using head #J1 screwdriver.
- Remove the small metal bar by pulling it outwards.

## Step 11

- Flip the disc tray over so the laser points downward.
- Pull the disc reader out of the disc tray.

To reassemble your device, follow these instructions in reverse order.
