Step 1 — Back Panel

⚠ Turn the power off before beginning this step.

● Using the spudger, remove the four 1/2 inch skid pads from the back of the laptop.

Step 2

● Remove the eight 7mm screws using the J0 Screwdriver.

Step 3

- Starting at the center front of the laptop, insert the metal spudger between the keyboard panel and the bottom panel, separating the bottom panel from the laptop.

- Continue prying around the sides to release more brackets.

Step 4
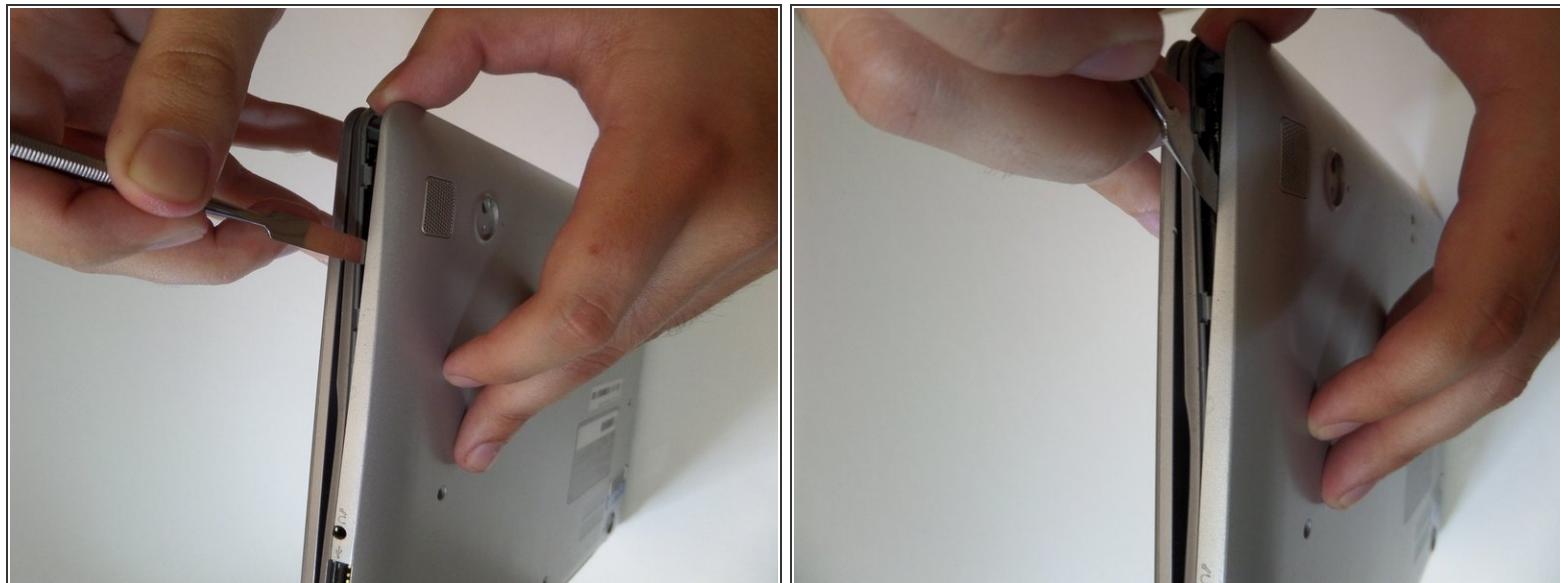

- After deconnecting all the brackets, pull the back panel away from the laptop.

- (i) Note: The back panel has some flex to it, don't be afraid to use some force.

Step 5 — Battery
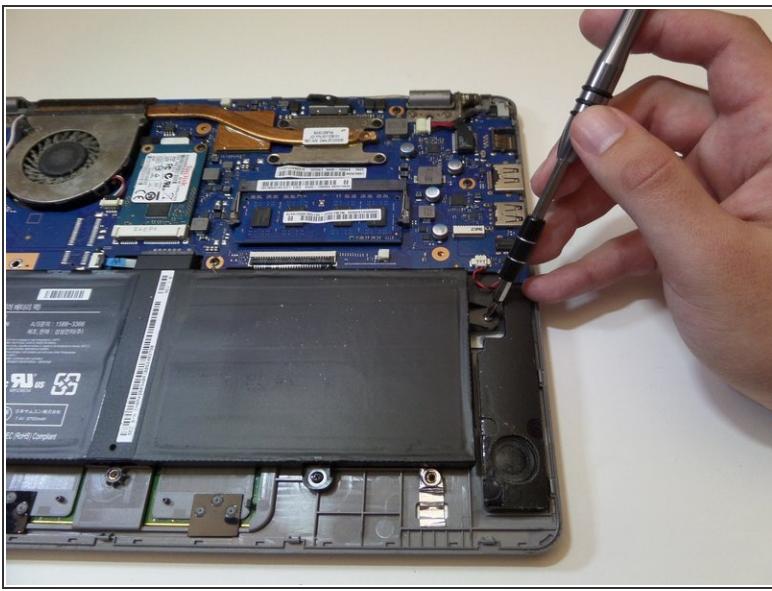

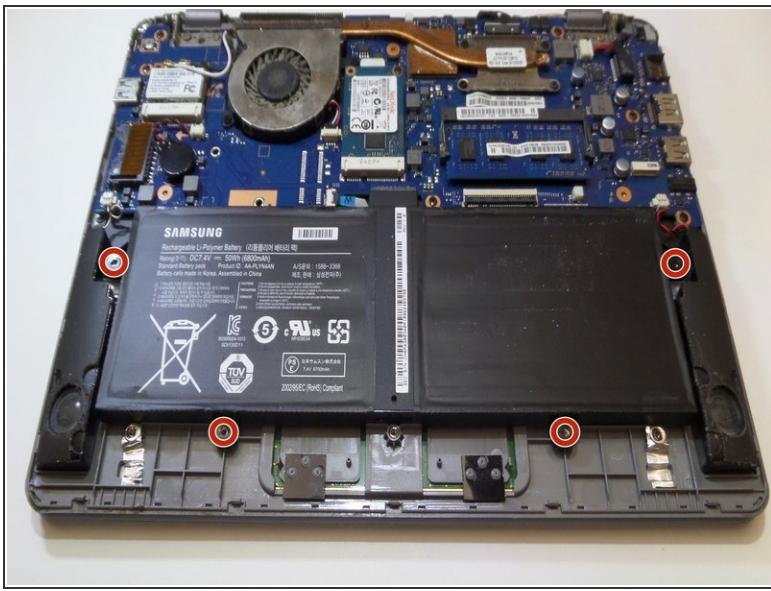

- Remove the four 3mm screws holding the battery with the J0 screwdriver.

Step 6
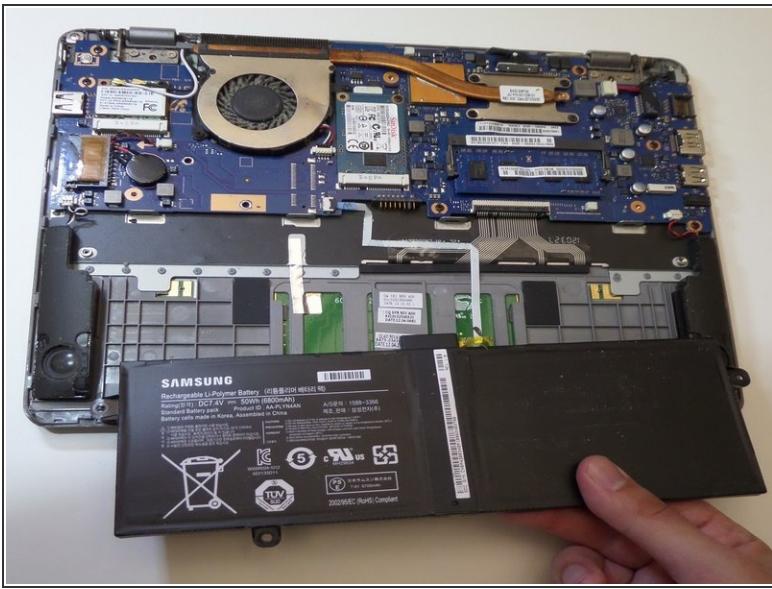

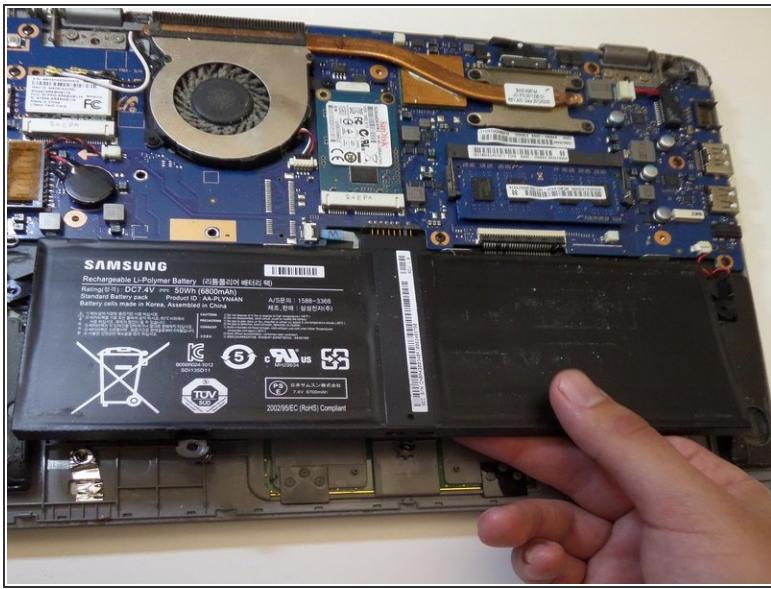

- Lift the battery up at an angle to disconnect the battery from the motherboard, then pull it away from the laptop.

⚠️ Do not lift the battery straight up. This will damage the battery's connectors.

Step 7 — RAM
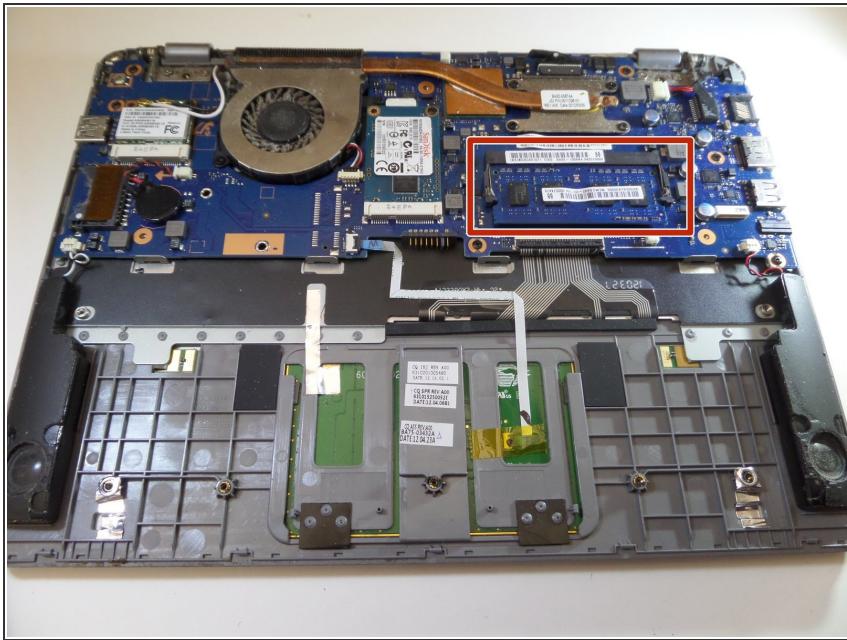

- Locate the RAM on the middle right side of the Chromebook.

Step 8
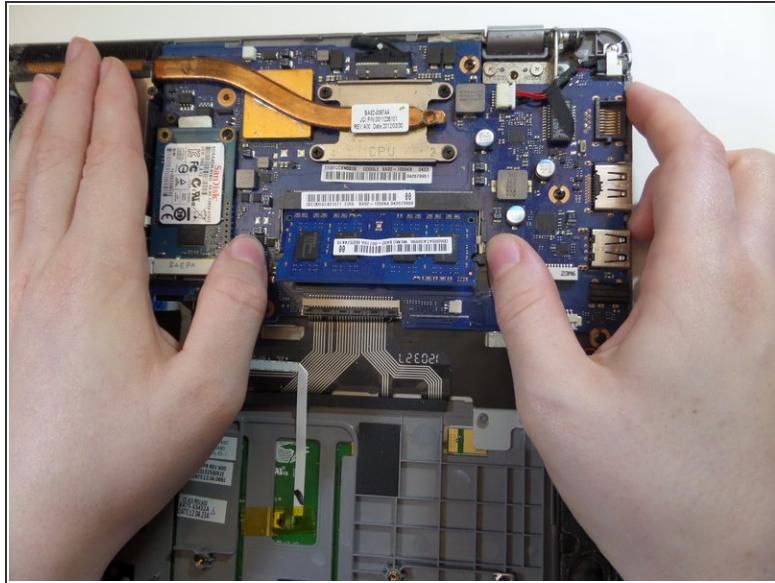

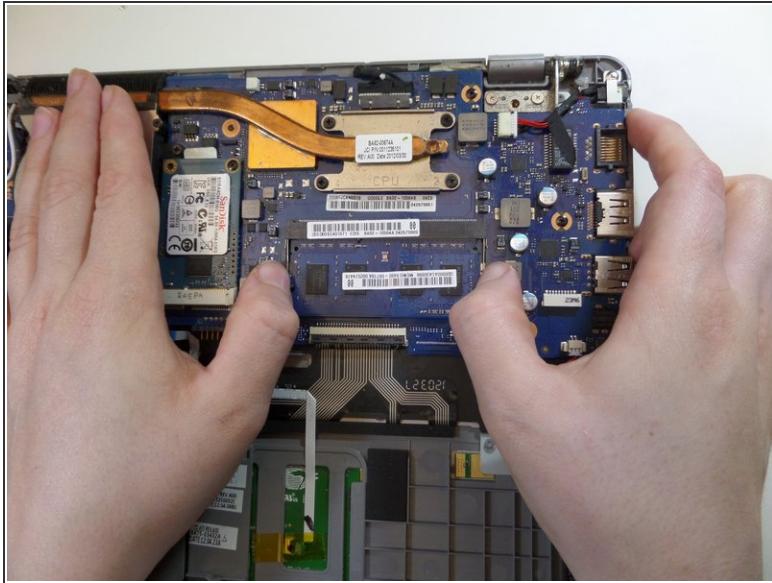

- Using your fingers, separate the silver clips that are holding the RAM in place on each side.

- ⓘ The RAM will "pop-up" on its own after separating clips.

Step 9
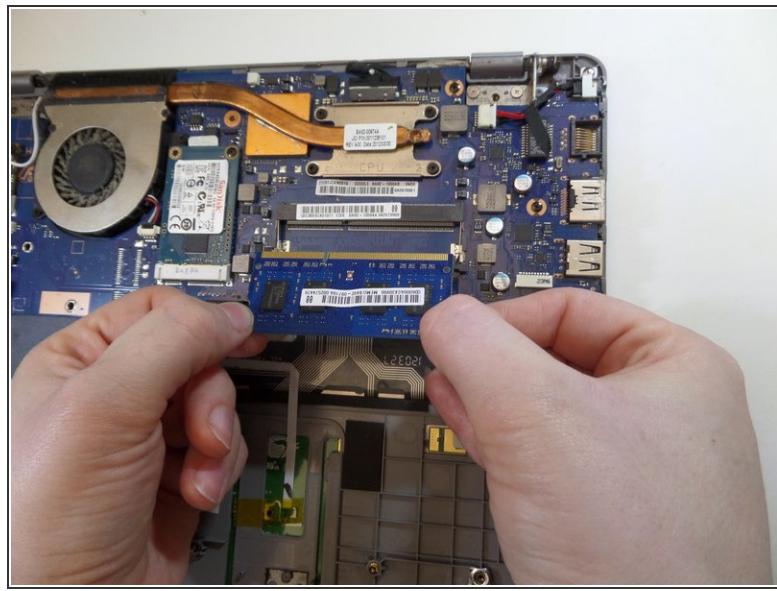

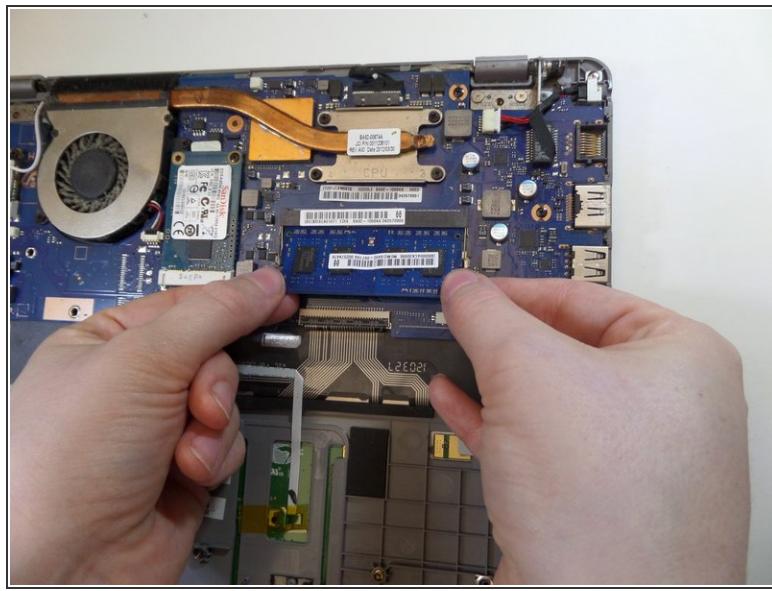

- Pull the RAM away from the Chromebook.

To reassemble your device, follow these instructions in reverse order.
