INTRODUCTION

This guide will show you how to remove your current SIM card port/slot and replace it with a new one.

🔧 TOOLS:

- Plastic Cards (1)
- Phillips #00 Screwdriver (1)
Step 1 — Rear Cover

- Open up the back case on the phone from the groove in the bottom of the phone.

- (i) You can do this by inserting a fingernail or similarly thin object into the groove and pulling up with mild force.

Step 2 — Battery

- (i) Below the left part of the bottom of the battery area there will be a groove large enough to fit in a finger or screw driver head.

- Use the groove to lever out the battery gently, in order to not damage either the battery or phone. Store the battery in a safe place.

Step 3 — microSD

- Push the SD card further into its metal slot until you hear a click.

- Release the card, and it should automatically eject itself.

- Remove the SD card.

Step 4 — SIM card

- Slide the SIM card out of its casing by pushing on it and sliding it upward.

Step 5 — SIM Card Port

- Carefully remove the back cover.

- Locate the 7 small black screws located around the edge of the phone.

- With a small philips head screwdriver, remove each of the screws, and place them in a secure location.
Step 6

- Removal of the back half of the casing.
  - Using a thin plastic flat head screw driver, or similar item. On the side of the phone insert the thin edge into the visible split between the 2 halves of the phone.
  - Use a prying motion to lift the casing up. This will separate the phone casing.
  - Repeat this motion all around the screen edge until the casing pops off.

Step 7

- Locate and release the volume button flex cable on the right.

- Locate and release the pop connector on the motherboard located to the left of the SIM card port.

Step 8

- Your SIM card port is now unattached.

- Remove SIM card port from motherboard.
