

# Samsung Entro SPH-M270 Teardown

This Guide will show you how to take apart a Samsung Entro SPH-M270 Flip Phone from Virgin Mobile.

Written By: Josh Opray

## Step 1 — Grab your phone and shut it off

- This is literally the easiest task of all. Just grab your phone and shut it off.

## Step 2 — Take Battery Cover + Battery

- Self Explanatory. Just take battery cover and battery off.

### Step 3 — The 4 Screws to be removed.

- The circles on this photo locate where the screws are at. I know the quality of my photo is not the greatest but I try. Anyway, you will need a small philips screwdriver to remove these screws.

### Step 4

- Once you unscrewed the 4 screws, just flip the phone open, then bend it a little. Then you will get the back part of the phone's frame and speaker off. After that, you will then gently remove the monitor cable from the phone shown in the red square.

- Keep in mind if you don't gently remove the cable, it can cause the little threads to go in all sorts of

---

directions and potentially snap off  
the cable port.

---

To reassemble your device, follow these instructions in reverse order.
