

# Samsung Epix LCD Display Replacement

Written By: Mark Wyse

## INTRODUCTION

This guide shows you how to access the LCD display inside your phone.

### TOOLS:

- [2.5 mm Flathead Screwdriver](#) (1)
- [Phillips #00 Screwdriver](#) (1)
- [iFixit Opening Tools](#) (1)

## Step 1 — Battery

- Press button on back of phone below camera.
- While button is depressed, remove the back panel of the phone by sliding off (not shown in picture).

## Step 2

- Grasp the battery near the bottom with two fingers.
- Lift battery up and out gently.

## Step 3 — LCD Display

- Remove the rubber screw cover in the top left corner by prying it up with an iPod opener tool.

## Step 4

- Use a Phillips #00 screwdriver to remove the six screws on the back of the phone. Three are evenly spaced on each side.
- The upper right screw is 4.5 mm and the others are 6.5 mm.

## Step 5

- Slide the iPod opening tool into the seam on the side of the phone and turn it slightly to unhook the eight clips.

**(i)** There are three clips on each side and two at the bottom of the phone.

## Step 6

- Once all eight of the clips have been unhooked, lift the back panel off of the phone.

**⚠** Be careful not to remove the front panel. It is still connected to the phone chassis by a ribbon cable in the bottom right corner of the motherboard.

## Step 7

- Using an iPod opening tool, undo the ribbon cable clip half way up the right side.
- Carefully remove ribbon cable.

## Step 8

- Remove the front faceplate by lifting it off of the phone chassis.

## Step 9

- Using the iPod opening tool, unlatch the LCD ribbon cable.

## Step 10

- Using a 1 mm flat head screwdriver, carefully pry under the lower left and right corners of the LCD screen.

***(i)*** The LCD is held in place to the chassis with adhesive strips.

***⚠*** Do not pry excessively hard or you may damage the circuitry on the back of the LCD.

## Step 11

- Lift the LCD display out from phone chassis.

To reassemble your device, follow these instructions in reverse order.
