

# Samsung Galaxy Note Midframe Replacement

A secondary guide for a secondary installation.

Written By: David Ritter

## INTRODUCTION

Use this guide to remove the back cover. This guide is a prerequisite for many other guides. You may need to remove the midframe if your need to install a new antenna, Micro USB port, headphone jack and earpiece, or replace the motherboard.

### TOOLS:

- [Phillips #00 Screwdriver](#) (1)
- [iFixit Opening Tools](#) (1)

## Step 1 — Battery

- Make sure the screen is face-down and the camera is opposite you.
- Insert the flat end of a spudger into the phone's top right rectangular slot.
- Use the spudger as a lever to pry open the back of the phone.

## Step 2

- With the spudger still inserted, carefully slide the spudger down the side of the phone.
- Gently peel off the back cover with your hand.

## Step 3

- Place the spudger in the battery's bottom right slot.
- Gently pry to remove the battery.

## Step 4 — Midframe

- Remove the nine 3mm screws on the perimeter of the phone with a Phillips #00 screwdriver.

## Step 5

- Remove the stylus from the bottom of the phone.

## Step 6

- Pry all the way around the sides with a plastic pry tool and gently pop off the midframe.
- If the cover does not come off easily, continue to pry along the phone's perimeter.

**⚠** This step can take some patience. Prying too hard or forcing the screen off can crack or scratch the screen and break the thin plastic around the stylus case.

- Separate the midframe from the phone. The midframe should now pull off easily.

To reassemble your device, follow these instructions in reverse order.
