### TOOLS:

## Step 1 — Rear Case

*(i)* The following four steps can be accomplished without a plastic opening tool. However, it's recommended to use a tool to best avoid breaking any clips along the perimeter of the rear case.

- Insert a plastic opening tool or fingernail into the notch in the gap between the rear case and the rest of the phone, located at the top of the device.
- Gently twist the opening tool to disconnect the clips securing the top of the rear case.

## Step 2

- Slide the plastic opening tool left along the top edge and repeat the twisting motion to widen the gap between the rear case and the phone.

## Step 3

- Continue to move the plastic opening tool around the perimeter of the top left corner, gently prying up along the rear case.

## Step 4

- Pry along the top right side, and continue prying down the right side of the rear case.

## Step 5

- Lift up and remove the rear case from the phone.

*(i)* You may need to peel the case up to separate it from any clips still holding it to the bottom of the phone.

## Step 6 — Battery

 This step can be accomplished without the need of a plastic opening tool. Just use your finger if you want to.

- Wedge a plastic opening tool into the small notch above the battery.
- Pry the battery up out of its recess.

## Step 7

- Remove the battery.

## Step 8 — microSD Card

- Using your fingernail, push the microSD card slightly deeper into its slot, until you hear a click.
- After the click, release the card and it will pop out of its slot.

★ For reassembly, push the microSD card into the slot until it clicks in place.

## Step 9

- Use your thumb to slide the microSD card out of the slot.
- Remove the microSD card from the phone.

To reassemble your device, follow these instructions in reverse order.
