INTRODUCTION

This guide will show you how to replace the front-facing camera on this device. As with the back-facing camera, this replacement will require most of the phone to be taken apart beforehand.

TOOLS:

- Spudger (1)
- iFixit Opening Tools (1)
- Heavy-Duty Spudger (1)
- Heat Gun (1)
- Phillips #000 Screwdriver (1)
- Flathead Screwdriver (1)

PARTS:

- [Samsung Galaxy S5 Sport Front Camera](#) (1)

Step 1 — Battery

- Remove the back casing of the phone using the notch located at the top.

Step 2

- Lift up the battery using a plastic spudger or fingernail.

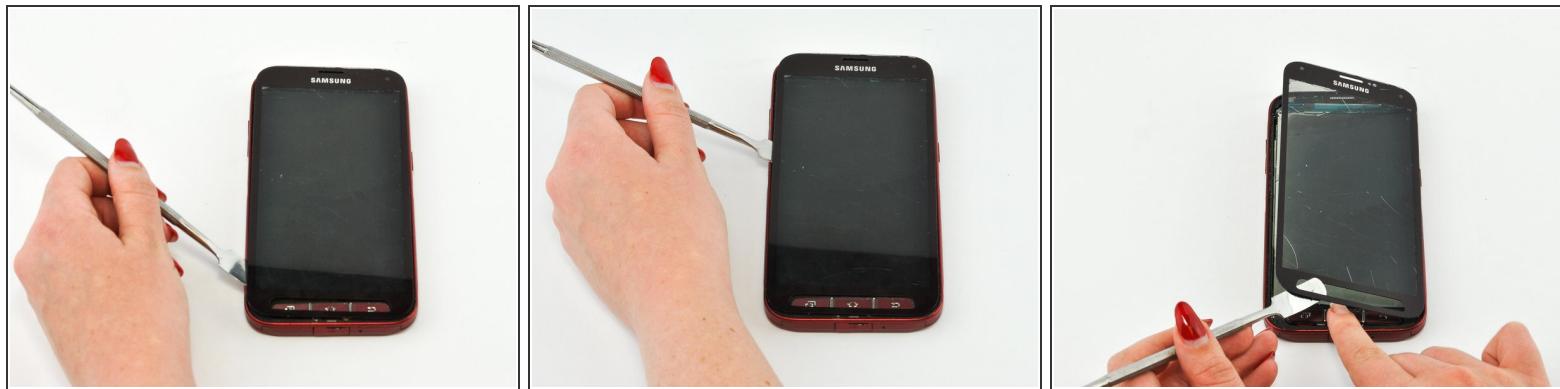

⚠ Damaging the battery may result in physical injury and/or damage to the phone.

Step 3 — Screen

- Turn on the heat gun.
- ⚠ Make sure you don't touch the metallic tip. You will burn yourself.
- Hold the heat gun roughly 6 inches away from the screen of the phone and slowly run the heat around the edge of the screen.
- ⓘ Keep at least 6 inches of distance from the screen. Keep moving the heat around to avoid warping the phone screen or internal parts.

Step 4

- Using a plastic opening tool or spudger, pry up the screen after the adhesive has melted.
- ⚠ When working with electronics, it's important to choose a tool that's ESD-safe to avoid accidental damage to the device. The metal spudger is great when you need serious prying power, but the regular black nylon spudger or a plastic opening tool should be used whenever possible.
- 📌 Because it is a water-resistant phone, the screen cannot be taken apart without breaking.

Step 5

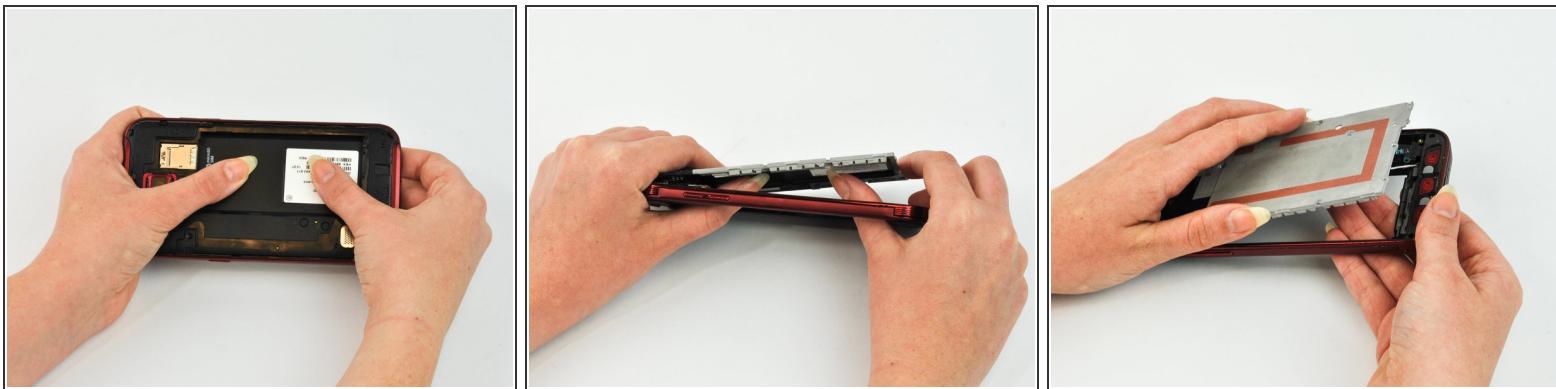

- The plastic cover of the phone may separate from the LCD screen. If so, also remove the LCD screen with the regular nylon spudger.
- In the upper right area of the LCD screen, there is a connecting ribbon. Be careful not to rip its connection to the motherboard.
- ⚠ Do not hold the phone too close to your face or eyes. Small glass shards may dislodge or the metal spudger may slip.

Step 6 — Front-Facing Camera

- Remove the screws around the plate

Step 7

- Push the plate out by applying pressure to the battery cavity.

Step 8

- Remove the camera from the plug at the top of the phone with tweezers. It should pop out fairly easily.

To reassemble your device, follow these instructions in reverse order.
