

# Samsung HMX-QF20 Lens Replacement

Replace a scratched lens for a crisper video quality.

Written By: Renee

## INTRODUCTION

Before replacing the lens, make sure to open the lens cover (use the switch on the side of the lens) for a better look at the scratched or dirty lens. If you suspect the lens is just dusty and in need of cleaning, replacing the lens is not necessary.

### TOOLS:

- [Phillips #00 Screwdriver](#) (1)

## Step 1 — Lens

- Remove the 4 mm screw on the underside of the camcorder near the tripod mount.

## Step 2

- Remove the 4 mm screw next to the buckle of the hand strap closest to the lens.

## Step 3

- Open the LCD screen. Remove the 4 mm screw on the inside panel, located at top left corner.

## Step 4

- Firmly grip and pull the front casing on the lens to remove it.

**⚠** Be sure to remove the front casing at gently as possible to prevent damaging the attached ribbon cable. If not careful, the ribbon cables could be torn.

## Step 5

- Remove the three 5 mm screws surrounding the lens.

To reassemble your device, follow these instructions in reverse order.
