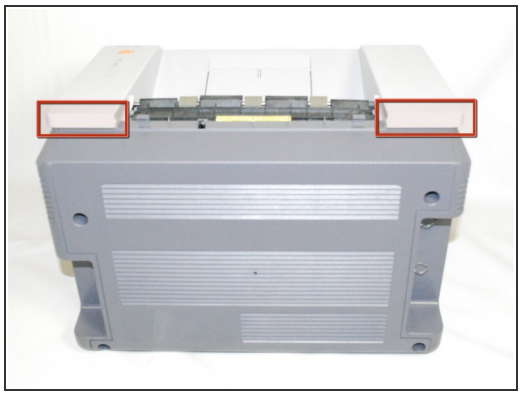
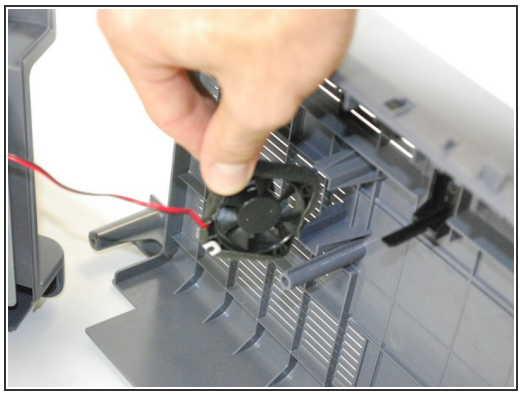
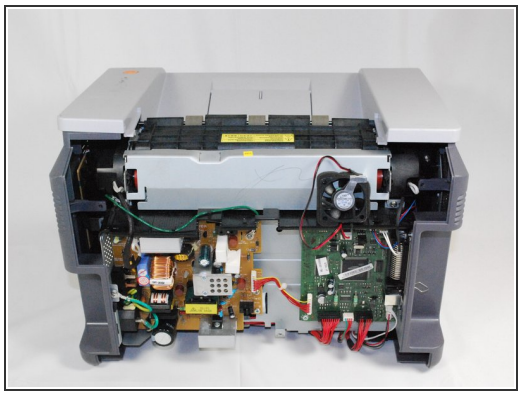
Step 3



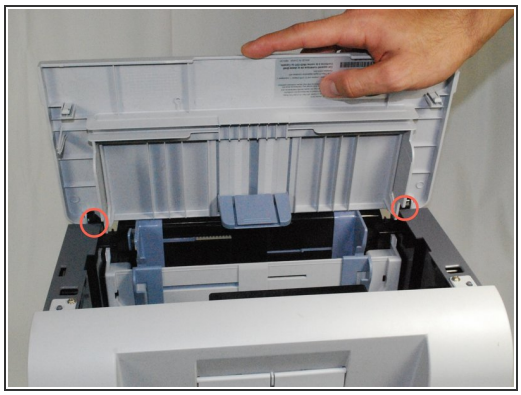


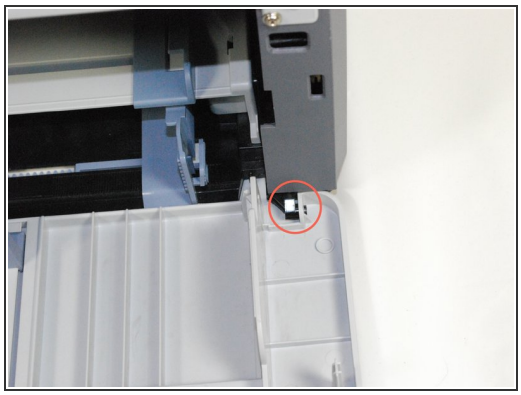


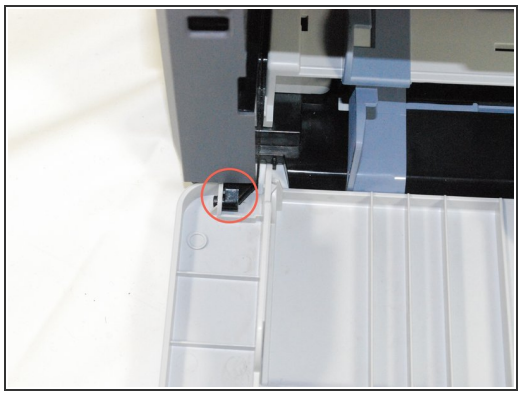
- Gently lift the top panel while simultaneously pulling off the back panel.

⚠ Before pulling out the back panel entirely, make sure to remove the rear cooling fan from its slot.

Step 4 — Power Button







- Remove front panel by gently moving the holes on the panel from the pegs attached to the main printer body, one at a time.

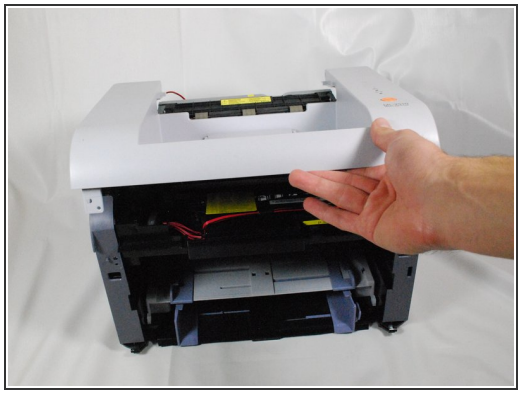
Step 5

- Using a Phillips #2 screwdriver, remove the two, 1", Phillips, PH#2 screws on the front face of the printer.

Step 6



- Using a plastic opening tool, gently lift one side of the top panel from its peg.
- Repeat for the other side.
- Lift the top panel from the front to remove entirely.
- Turn over the top panel to reveal the underside, revealing the button.

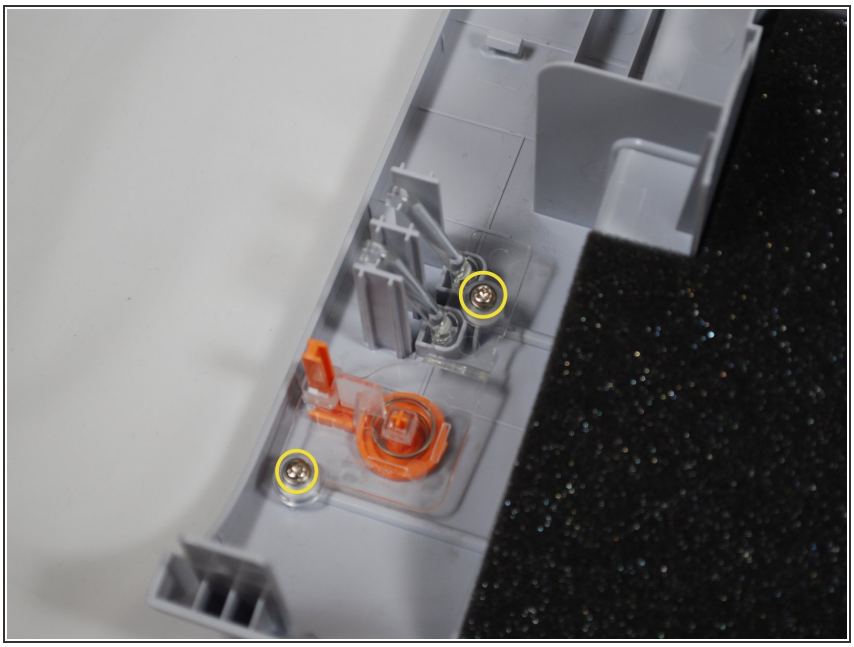
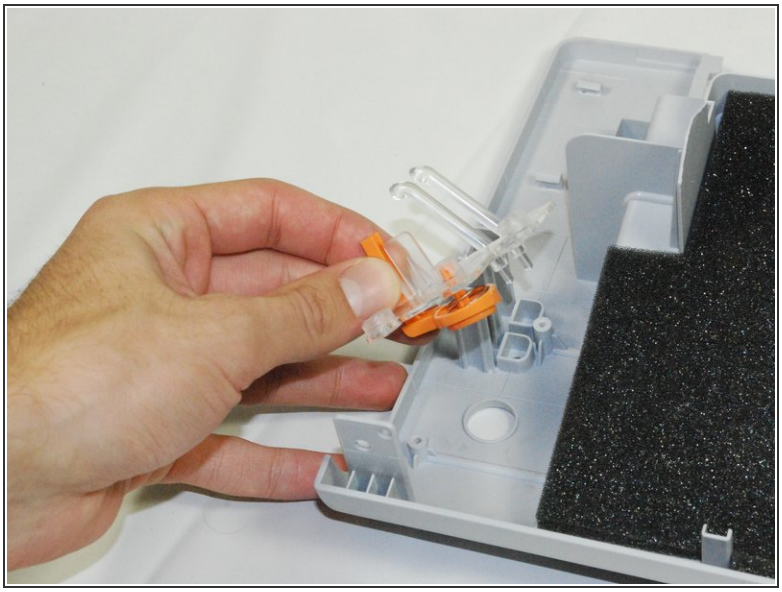
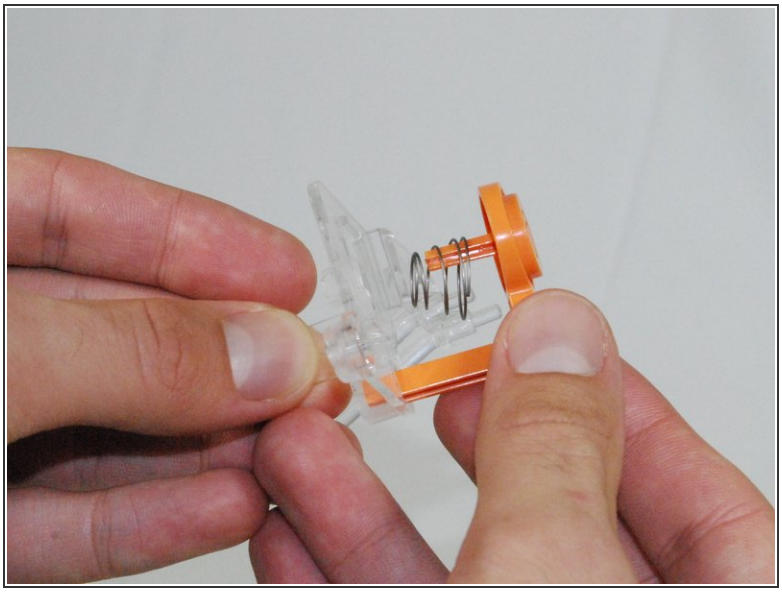
Step 7



- Using a Phillips #2 screwdriver, remove the two, 1", Phillips, PH#2 screws from the underside of the top panel

Step 8





- Remove the clear plastic piece and the orange button from the panel.
- Remove the orange button and the spring from the clear plastic piece.
- Replace the button and reassemble the printer following the directions in reverse order.
