

Shark ION Robot R75 Side Brush Replacement

This is an easy, step-by-step guide that will teach you how to replace the side brushes on your Shark ION Robot R75.

Written By: Kyle Wilbourn

INTRODUCTION

The side brushes on the Shark ION Robot R75 channel debris towards the main brush so that it can be collected. Over time, these brushes will wear out, with the bristles becoming more flat and spread out, decreasing their ability to sweep up debris. If you notice that your robot vacuum is missing more debris than usual, especially in corners and tight to reach places, replacing the side brushes may restore the full cleaning potential of your vacuum. It is advised that you inspect the brushes regularly to determine their health and whether or not they should be replaced.

While they do indeed perform an important role, replacement of the side brushes is perhaps the easiest part to replace on the R75.

TOOLS:

- [Phillips #1 Screwdriver](#) (1)
-

Step 1 — Side Brush

- Grab the side brushes by the plastic tab at the base of the bristles, and gently lift up.

i It's recommended to clean the area with a dry microfiber cloth during replacement, as debris can collect beneath the brush during use.

To reassemble your device, follow these instructions in reverse order.
