## INTRODUCTION

In order to keep your device in working order, the tape transport unit may need to be replaced.

### TOOLS:

- [Phillips #00 Screwdriver](#) (1)

## Step 1 — Tape Transport Unit

- Remove the eight Phillips #00 screws. There are six screws on the bottom of the camera and two screws beneath the back light button.

## Step 2

- Remove the five Phillips #00 cassette side screws.

## Step 3

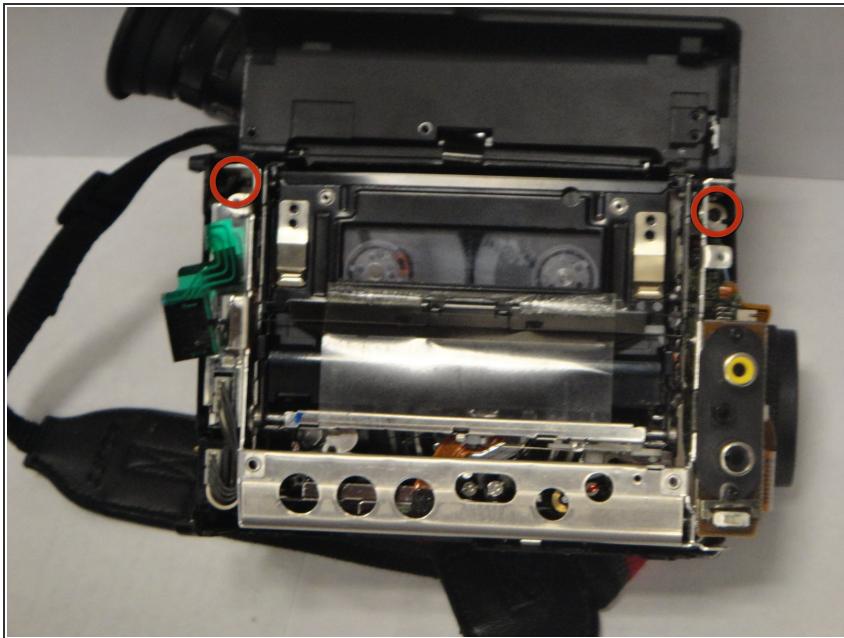

- Remove the three Phillips #00 screws located on the top of the lens side cover.

## Step 4

- Remove the Phillips #00 screw holding the microphone on.

## Step 5

- Remove the two Phillips #00 screws from lens side cover.

## Step 6

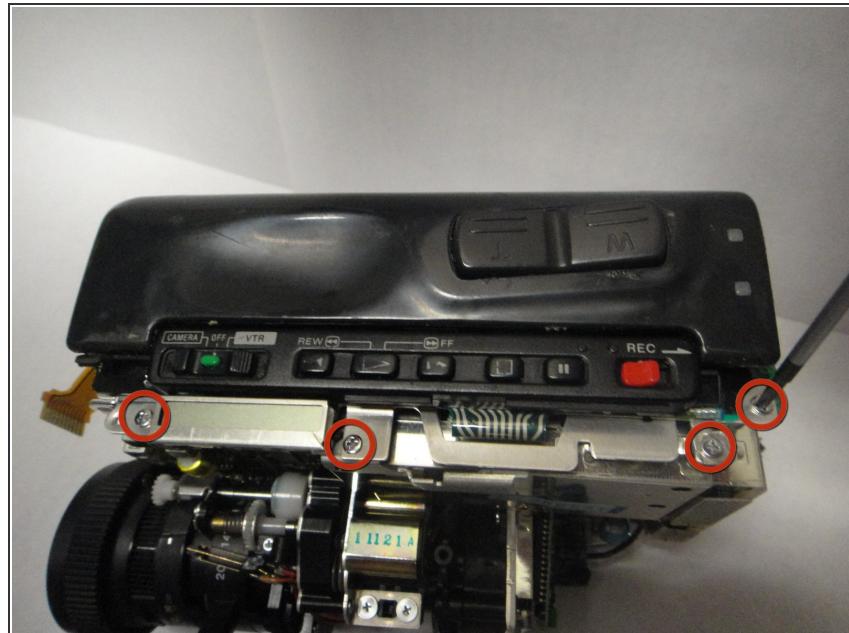

- Slide the lens side cover away from camera.

## Step 7

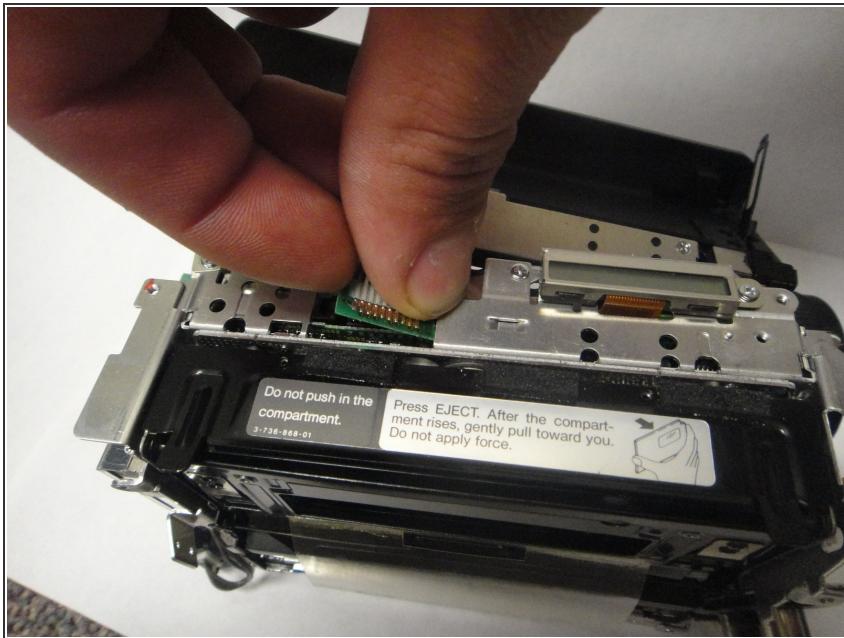

- Remove the Phillips #00 screw from the tape transport slider.

## Step 8

- Remove the four Phillips #00 screws located on the top of the camera.

## Step 9

- Remove the electrical connector from camera.

## Step 10

- The tape transport unit is now free from the camera.

To reassemble your device, follow these instructions in reverse order.
