---

## INTRODUCTION

Removing the lens mount is a quick process that is fully outlined by this guide.

### TOOLS:

- [Phillips #00 Screwdriver](#) (1)
-

## Step 1 — Battery

⚠ We need to turn off the camera because we are removing components that could get damaged if the power is still on.

- If the camera is on, rotate the power switch on top of the camera counterclockwise to turn the camera off.

## Step 2

- Flip the camera over such that the power switch points down.
- Slide the switch on the bottom of the camera grip towards the lens to open the battery door.

### Step 3

- With the battery door open, push the blue lever in the battery compartment to release the battery.

### Step 4 — SD card

- To the left of the battery compartment, the SD card needs to be pushed down slightly with your

fingers, which will cause the card to eject.

- Pull the card out with your fingers.

## Step 5 — Lens

- First, turn the camera upside down.
- Press the button located next to silver lens mount and rotate the lens counterclockwise.
- Pull the lens away from the camera body.

⚠ After removing the lens, replace the lens or attach the body cap as soon as possible to prevent damage to the shutter.

## Step 6 — Lens Mount

- With the front of the camera facing you, remove the four silver #00 Phillips screws from the metal lens mount.

## Step 7

- Remove these three layers from the lens mount with your finger or by turning the camera face down.

## Step 8

- Remove the two newly visible #00 screws within the metal ring.

## Step 9

- Remove the final metal ring from the mount.

To reassemble your device, follow these instructions in reverse order.
