## Step 1 — Remove Headband Screws

- Remove the two 5mm Phillips #00 screws from each side of the headband connected to the metal track.

Step 2 — Remove Plastic Screw Bracket
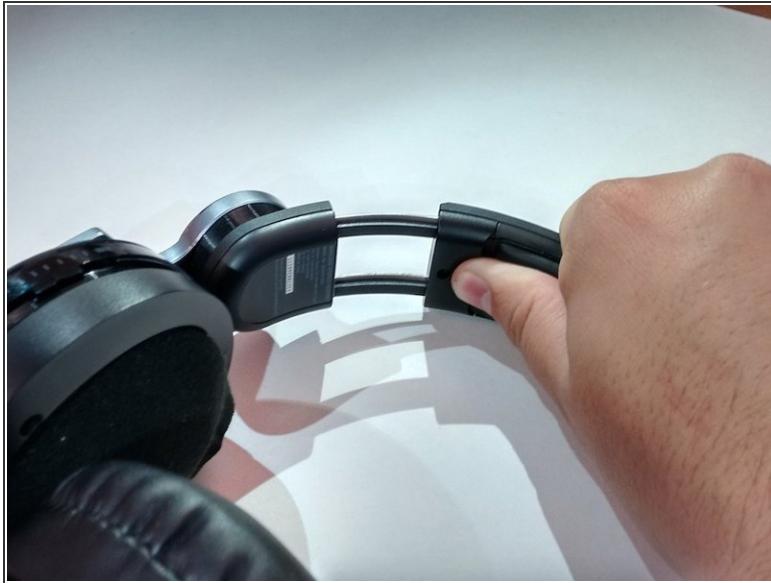

- After removing the screws, push the small plastic protector on one of the sides towards the speaker closest to it.
  - After the protector has slid out of its slot, pull it away from the bar until it pops off the track.

- Repeat this process for small plastic protector on the other side.

Step 3 — Rail Cushion Removal
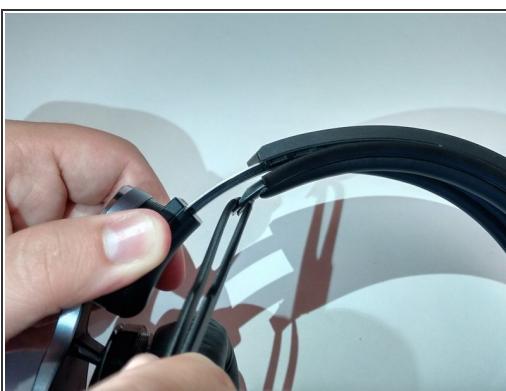

- Using your thumb, slide the cushion on one of the two adjusting rails toward the closest speaker.

- Once enough of the cushion has separated from the rail, pull the rest of it off.

- Repeat the process for the other rail.

This document was generated on 2019-09-25 02:47:45 PM (MST).

Step 4 — Slide Headband Off Rails

- Gently pull the headband away from one of the speaker component groups, as if expanding it. Continue pulling until it is completely off the track.

- Remove the white and red wires from inside the headband.

  ⚠ Be sure to keep the two speakers close together since they are still linked via the speaker wires.

- Repeat this process for the other side.

To reassemble your device, follow these instructions in reverse order.
