Step 1 — Battery

⚠ Ensure that the laptop is powered off before disconnecting the battery.
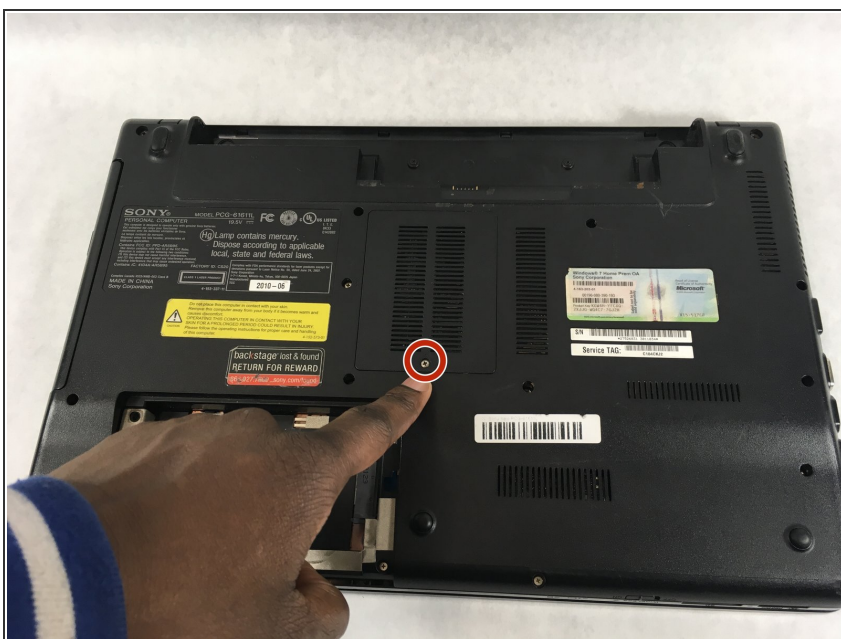

● Flip the laptop over so the underside of the laptop is facing up.

Step 2

- Slide the two tabs towards each other until the battery disconnects slightly from its position.

- Carefully lift the battery out of its position away from the laptop.

- (i) The battery is not pictured here, since it is missing from this particular device.
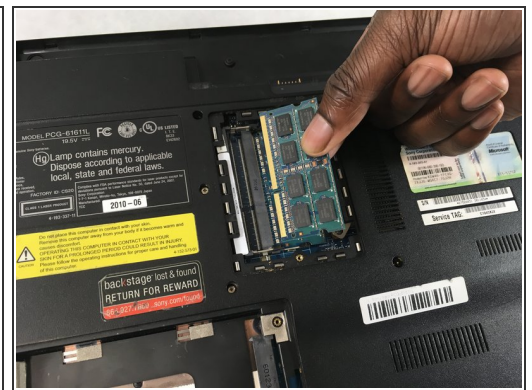

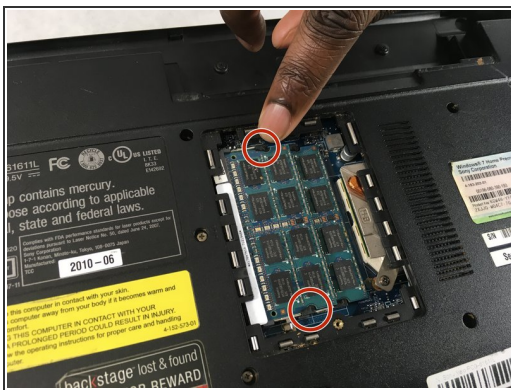

Step 3 — RAM

- Using a JIS #0 screwdriver, loosen the captive screw attached to the RAM cover.

- (i) This screw will not come out all the way, but will remain attached to the cover instead.

Step 4

- Remove the cover which will reveal the two RAM sticks.

Step 5

- Push the two tabs holding the RAM sticks in place, away from each other.

- The first RAM stick will pop up out of place. Remove it away from its position.

Step 6

- Push the two tabs holding the second RAM stick in, away from each other.

- The second RAM stick will pop up out of place. Remove it away from its position.

To reassemble your device, follow these instructions in reverse order.
