## INTRODUCTION

Keys stuck or unresponsive? Before deciding they need to be replaced lift them up and clean the dust. If that doesn't work replacement may be necessary.

### TOOLS:

- [iFixit Opening Tools](#) (1)
-

## Step 1 — Key

- Wedge spudger underneath key being replaced and lift to remove
- ⚠ Careful to not lift the wires under the keyboard as they are what makes the key push down

## Step 2

- Remove key completely from keyboard

### Step 3

- Place new key in same orientation as surrounding keys
- Use your finger to firmly press down key until it clicks into place

To reassemble your device, follow these instructions in reverse order.
