

Summer 3D Lite Convenience Stroller Back Wheel Replacement

If a front wheel isn't working at maximum efficiency. This guide will show you how to take it off and either repair the wheel or replace it with a new one.

Written By: Nick Taylor

INTRODUCTION

Use this guide to replace your back wheel on your Summer Infant 3D Lite stroller.

Step 1 — Back Wheel

- Set the stroller up so the front wheel is on the ground with the metal push tab up.

Step 2

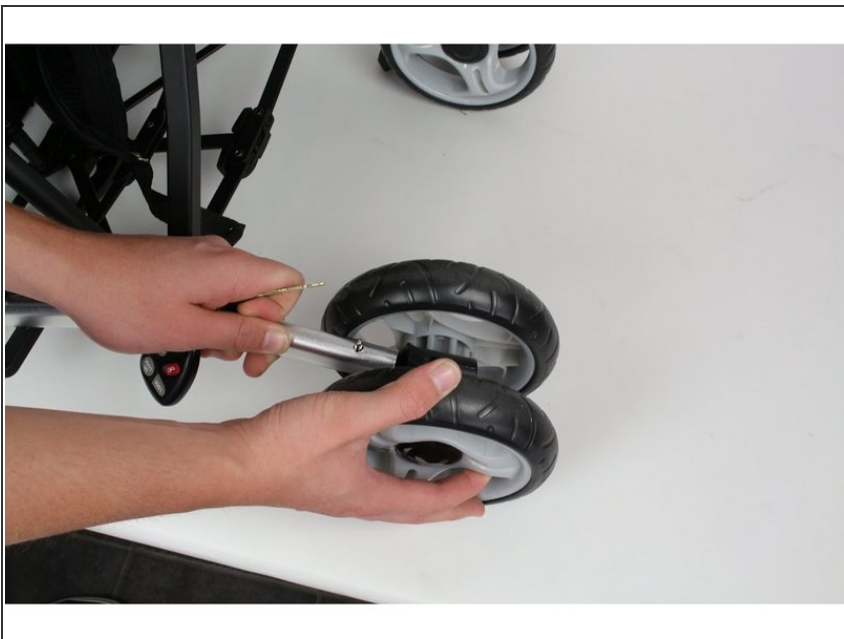

- Push the tab in with your finger enough so the plastic can slip out above the tab.

Step 3

- **OPTIONAL:** If the tab is being difficult, use a key to push the tab in further in order to slip plastic out of place.

Step 4

- The wheel should slide right off the pole once the tab is pushed out of place. It is now possible to make repairs or replace the wheel completely.

To reassemble your device, follow these instructions in reverse order.
