INTRODUCTION

This guide will show you how to remove and replace the outer shell of your SwagTron T1

🔧 TOOLS:

- Phillips #2 Screwdriver (1)

Step 1 — Back Panels

⚠ Ensure that the SwagTron is off.

● Turn the SwagTron upside down to see the underside.

Step 2

● Unscrew the eighteen 10mm screws that secure the back panels using a Phillips #2 screwdriver.

ⓘ The screws are tightly in place. It will take effort to screw them out.

⚠ The panel is still attached to the SwagTron by wires that go to the motherboard.

● Carefully lift the panels off

Step 3

- Follow the wires from the panels to the motherboard.

- You may need to cut any zip ties that are holding the wires together.

- There is one connection on the battery side and three on the other side that must be removed.

⚠ These connections may be difficult to remove. Try to securely press the connection and pull firmly.
- Your back panels are now completely removed.

Step 4 — Outer Shell

- Unscrew the twelve 10mm screws that connect the metal chassis to the top plastic panel.

- (i) These screws will be low into the SwagTron.

Step 5

- Turn the SwagTron right side up and slightly lift up the panel.

- ⚠ Be careful to not pull too hard because the panel is still attached to the SwagTron by wires.

Step 6

- Turn the SwagTron over and disconnect the wires from the motherboard.

- Follow the wires to the underside of the SwagTron.

- Carefully remove the cord and the panel together.

- All the panels are now free from the SwagTron.

To reassemble your device, follow these instructions in reverse order.
