

# Teardown: Breville Toaster

This guide will give you photographic images and descriptions as how to teardown a Breville toaster.

Written By: Aisyah Azmi

## INTRODUCTION

This teardown is done as to comply with the task 2 IDES 2171. Photographed and written by Ashley Mutandiro and Aisyah Azmi, first year students of Bachelor of Industrial Design UNSW Sydney, Australia.

### TOOLS:

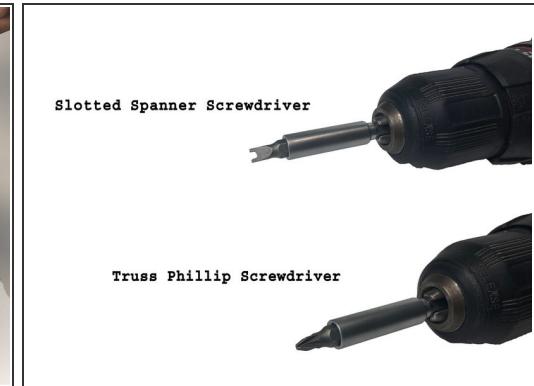

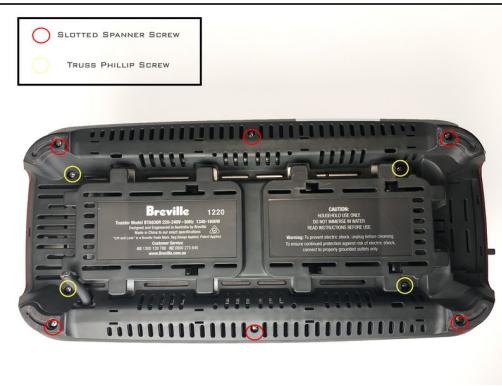

- [64 Bit Driver Kit](#) (1)
- [Spudger](#) (1)
- [Slip Joint Pliers](#) (1)

## Step 1 — Breville Toaster Teardown

- Breville Toaster.
- The toaster before the teardown process.

## Step 2

- Turn the toaster upside-down.
- Use the drill to unscrew the six slotted Spanner head screws
- Use the drill with corresponding screwdriver bit to remove the Truss Phillip screws
- The Slotted Spanner head screws hold the four rubber feet at the bottom of the casing.

## Step 3

- Unattach the four rubber feet.

## Step 4

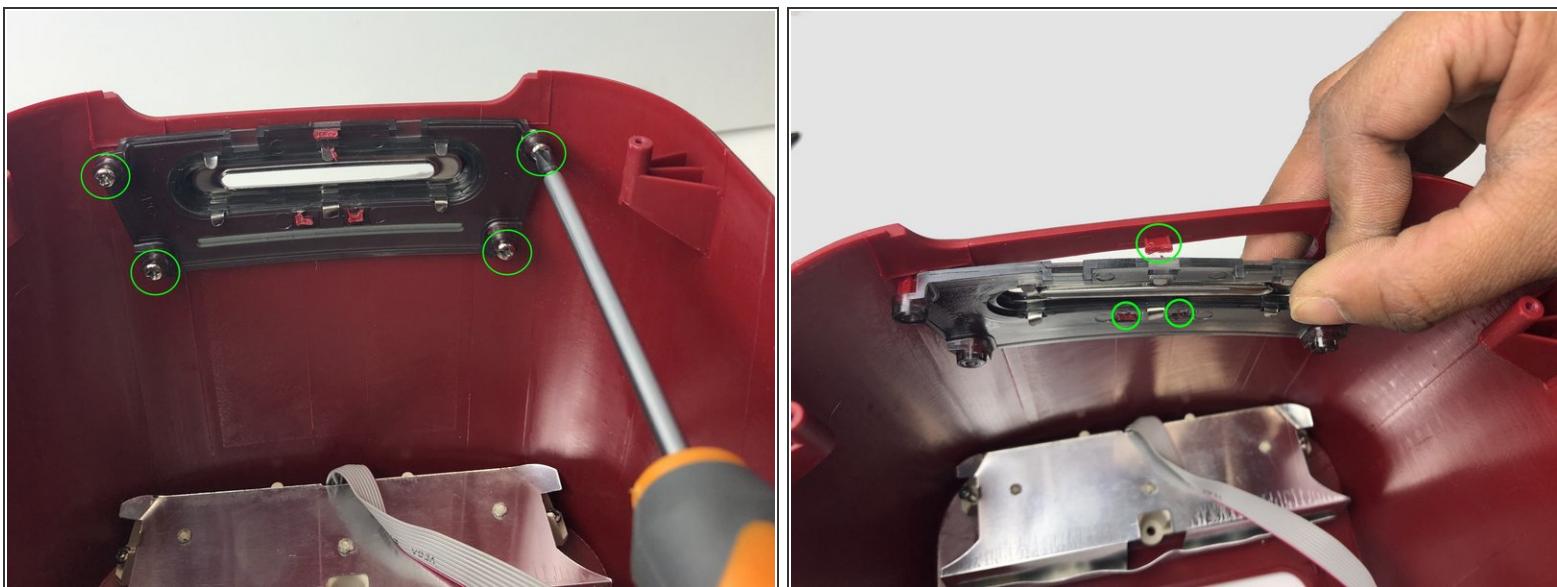

- Detach the timer knob using a flat head screw driver
- Remove the internal components from the red casing

## Step 5

- **Note:** Red casing is still attached to the interior body of the toaster.
- Detach electric circuit housing from red casing

## Step 6

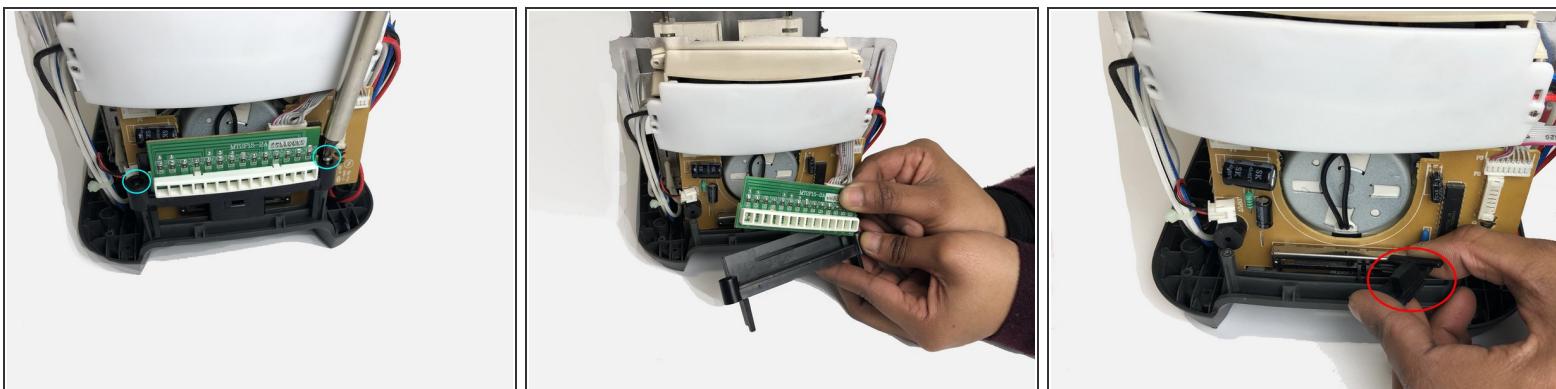

- Firstly, unscrew the four Pan Phillip head screws
- Then snap off the three welded plastic studs to detach the timer knob housing from the red casing

## Step 7

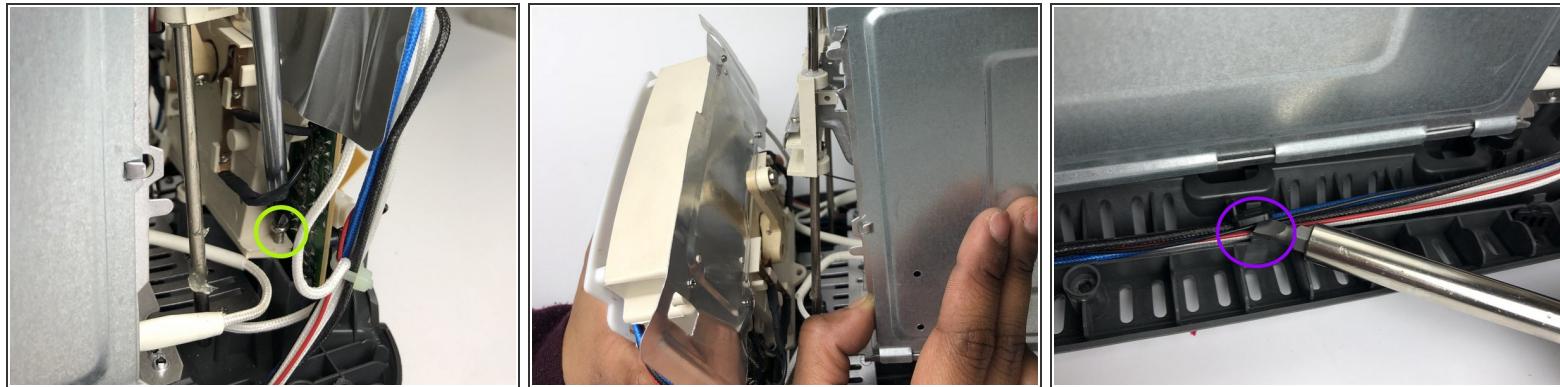

- Unfasten the two Pan Phillip head screws to detach the buttons' housing

## Step 8

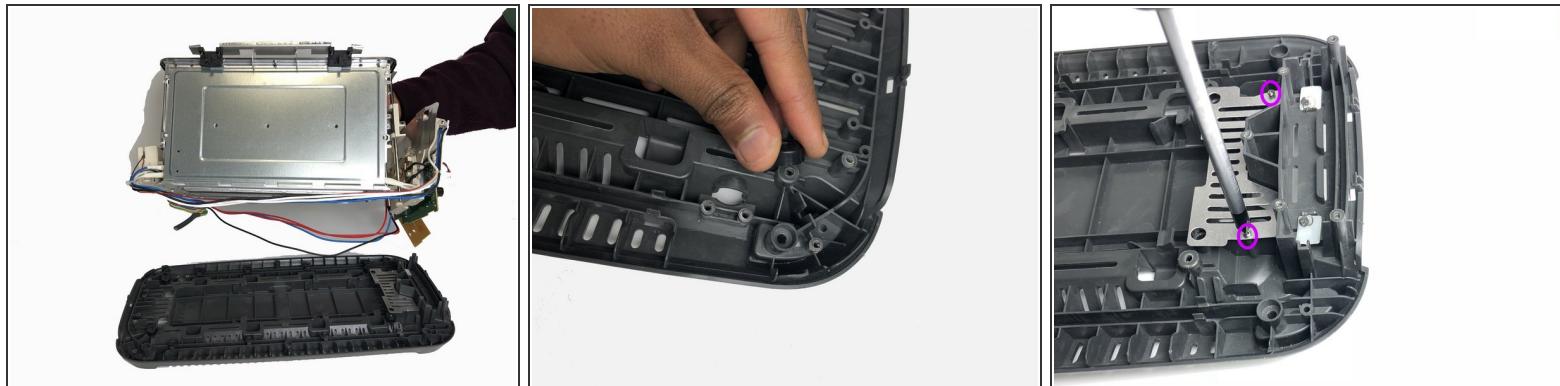

- Note: There are two housings attach to both side of the interior body of the toaster.
- Remove the two Pan Phillip head screws to detach the circuit board from the heat controller housing.
- Then, remove the slider as well.

## Step 9

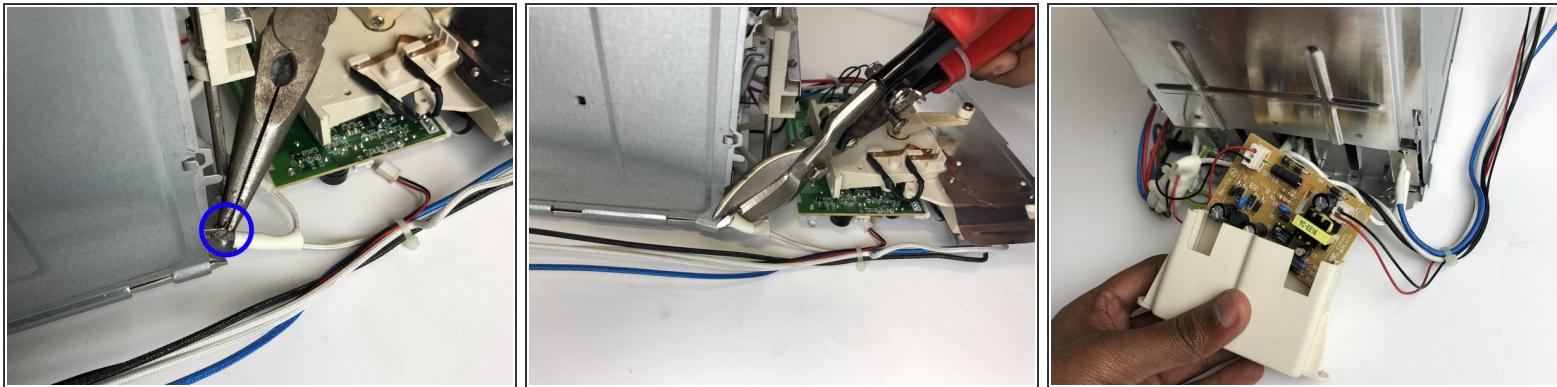

- Remove the circuit board housing for the heat controller from the interior body of the toaster by unscrewing two Pan Phillip head screws
- Remove the cable fasteners using a flat head screw driver

## Step 10

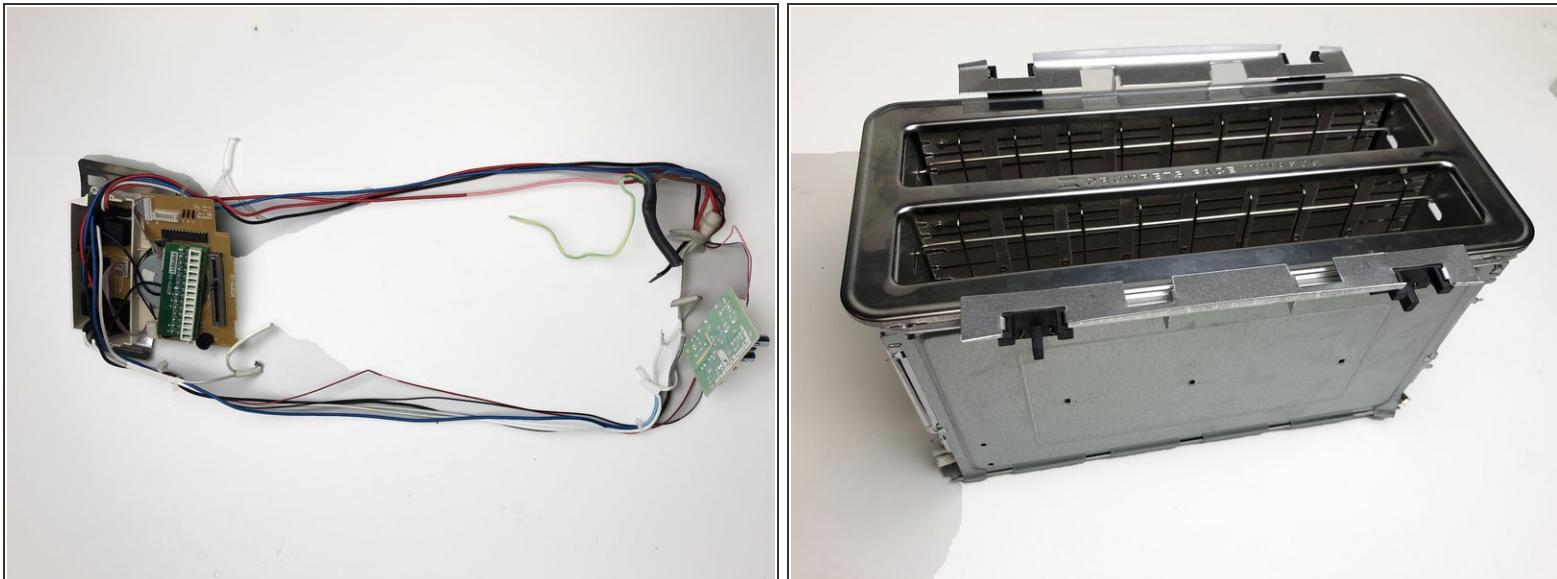

- Separate the interior body of the toaster from the bottom cover.
- Remove the screw caps
- Unscrew the two Pan Phillip head screws to detach the aluminium vent

## Step 11

- Use pliers to break apart the welded wires from the interior body.
- Snip off the rest of the wires still attached to the interior body using a wire cutter
- Remove the circuit board from its housing

## Step 12

- Separate the electric components from the interior body

## Step 13 — Components of the Toaster Teardown

- Insert wisdom here.
