

TomTom GO Live 1535M Logic Board Replacement

In this guide we will disassemble the device to remove the logic board so it can be replaced.

Written By: Mathias Sagide

TOOLS:

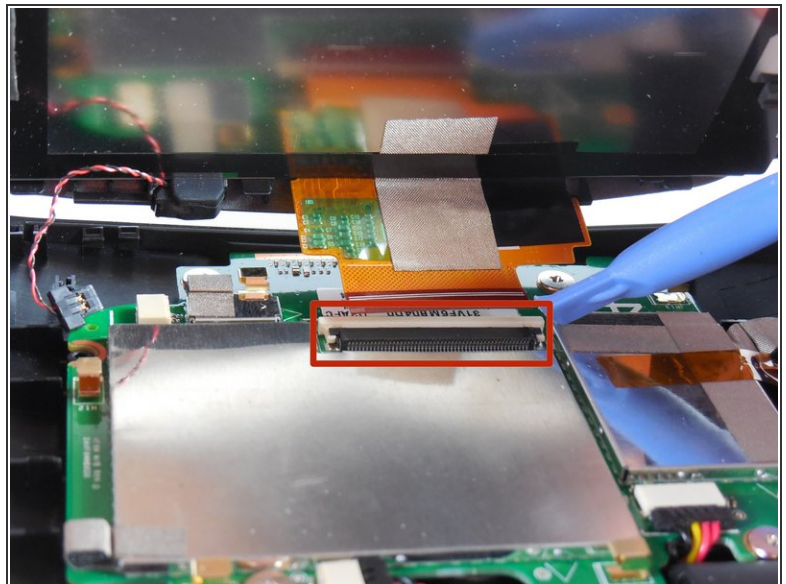

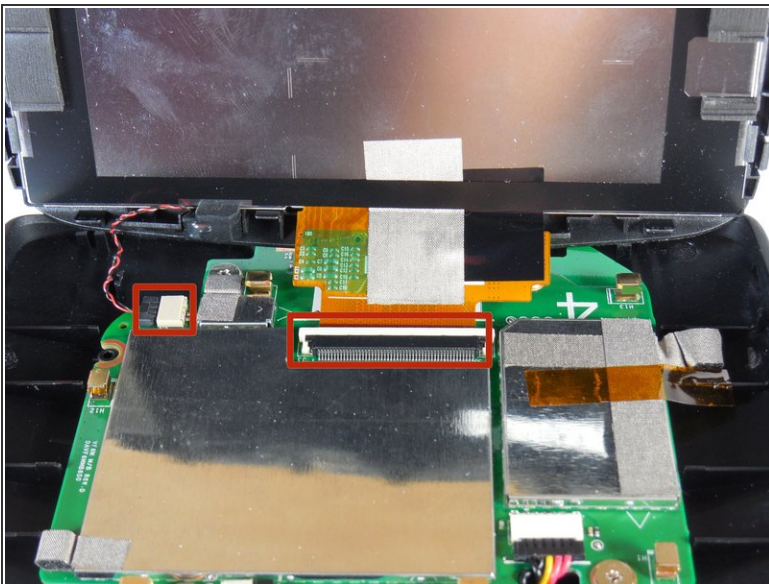

- [Phillips #00 Screwdriver](#) (1)
 - [Tweezers](#) (1)
 - [64 Bit Driver Kit](#) (1)
 - [iFixit Opening Tools](#) (1)
-

Step 1 — Screen

- Slip a small opening tool underneath the screen, gently sliding it around the outside edge.
- ⓘ It may be easier to start at the corners.

Step 2 — Cables

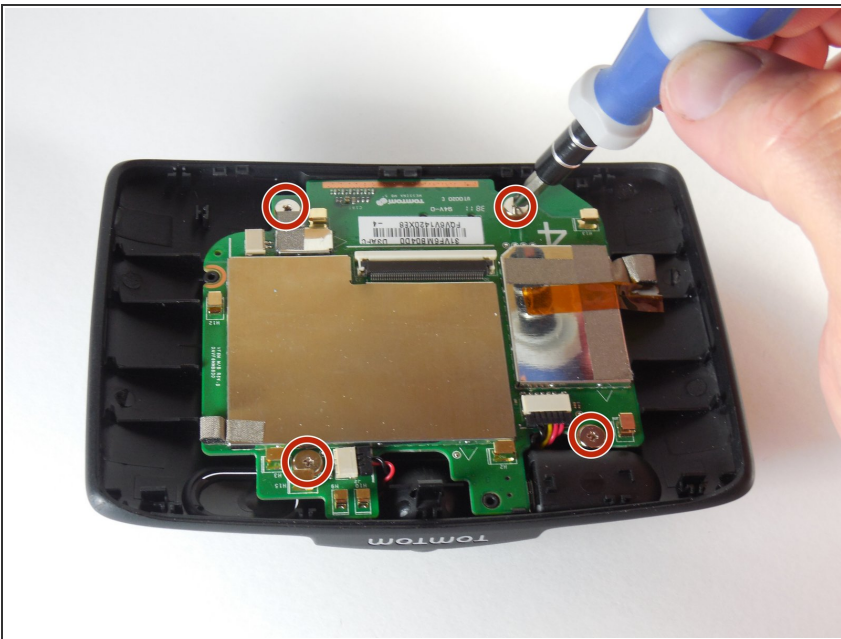

- Carefully remove the reset button cable (located on the left) and the ribbon cable.
- Remove the screen and set it aside.

Step 3 — Logic Board Cables

- Remove the logic board cables.
- ⚠ We highly advise that a pair of tweezers are used for this step to ensure no part is damaged.

Step 4 — Screws

- Remove the 3.6mm screws with a Phillips Screwdriver.
- After removing the screws simply lift the logic board from the base.

To reassemble your device, follow these instructions in reverse order.
