

# Toshiba Satellite C50D-A Optical Drive Replacement

In this guide, we will show you how to replace the optical drive in your Toshiba Laptop.

Written By: Amber van Solingen

## INTRODUCTION

This guide details how to replace the optical drive in your laptop. You will need a pry tool and Phillips screwdriver to complete the prerequisite steps (removing the back of the device) to access the optical drive, remove it, and replace it with a new one.

### TOOLS:

- [iFixit Opening Tools](#) (1)
- [Phillips #1 Screwdriver](#) (1)

## Step 1 — Battery

- Click button 1 to the unlocked position.

*(i)* This button will have a 1 by it.

## Step 2

- Push and hold button 2 to the left.
- As you push button 2 to the left position, simultaneously lift up the battery pack.

*(i)* This button will have a 2 by it.

## Step 3 — Lower Case

- Using the Phillips #1 screwdriver, remove the eleven 2.5mm screws.

## Step 4

- Remove the one 2.5mm Phillips #1 middle plate screw.

## Step 5

- Lift up the middle vent panel.
- Set the panel to the side.

## Step 6

- Using the plastic opening tool, remove the outer panel and set to the side.

**⚠** Be careful not to break the back of the computer.

## Step 7 — Optical Drive

- Locate the optical drive and find where it is slotted into the motherboard.

 Be careful not to break the attachment site.

## Step 8

- Gently lift up the optical drive at a slight angle, and pull it towards you to remove it.

To reassemble your device, follow these instructions in reverse order.
