Step 3 — Keyboard

- After removing the battery, open up your device so that the keyboard is facing you.

Step 4

- Using the spudger, go around the periphery of the keyboard while gently lifting out the keyboard little by little.

Step 5

- Lift the old keyboard out of the way.

Step 6
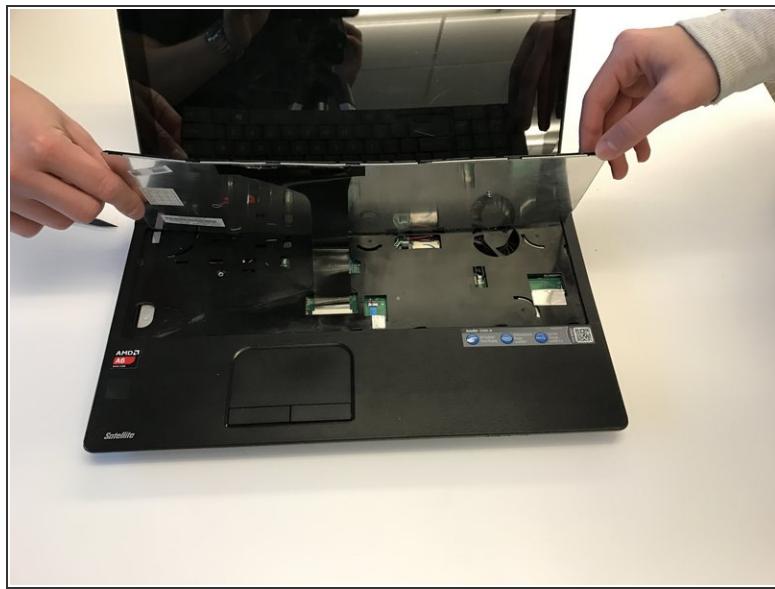

⚠️ Before pulling out the keyboard, notice that it is connected to the motherboard via a ribbon cable. Gently press out the ribbon cable from its connection site and put the old keyboard aside.

Step 7
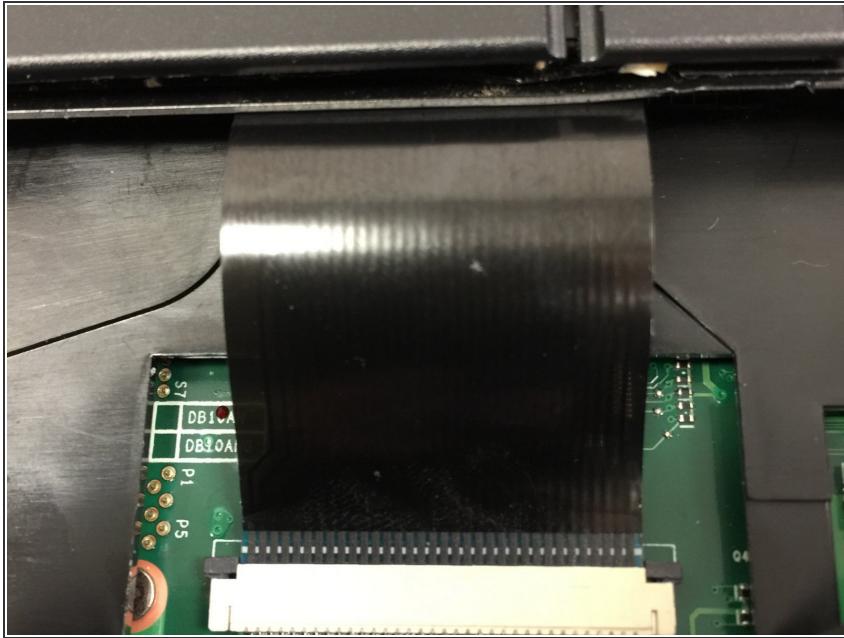

- Locate the keyboard ribbon cable, and the cable retainer keeping it attached to the motherboard.

Step 8
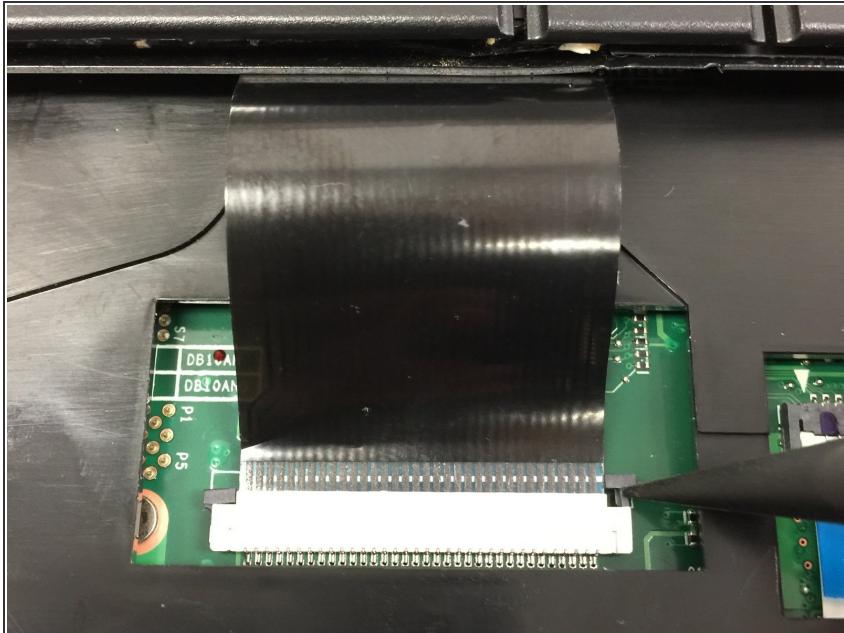

- Use your nylon spudger to release the retainer by gently lifting the retaining clips on either side.

Step 9
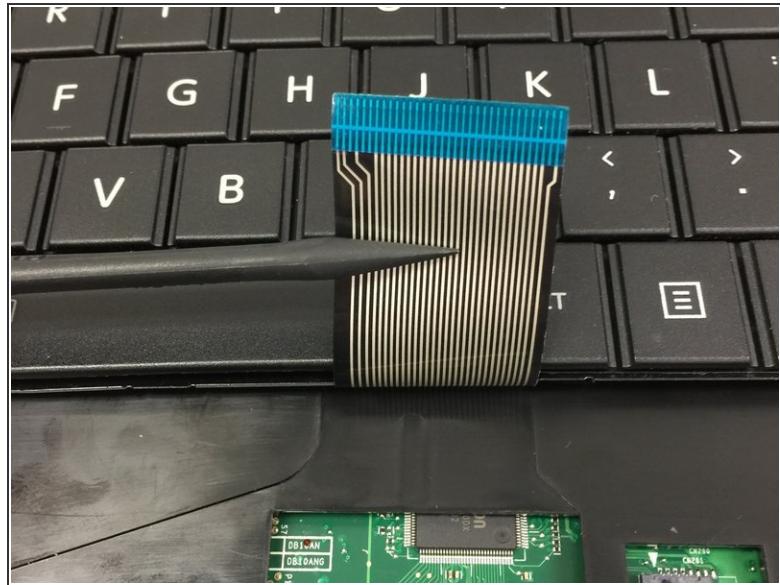

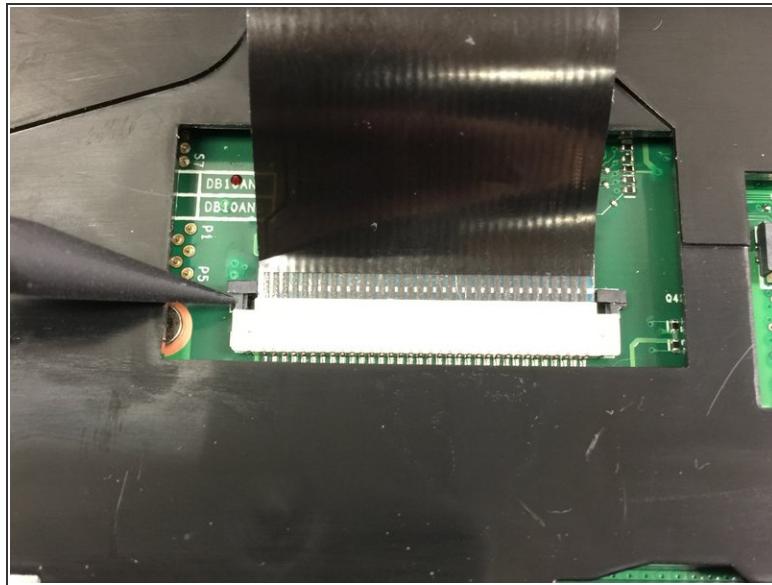

- Once both retaining clips have been lifted up, the ribbon cable should release with a gentle pull.

- You can now remove the keyboard.

To reassemble your device, follow these instructions in reverse order.
