🔧 TOOLS:

- Phillips #0 Screwdriver (1)
- iFixit Opening Tools (1)

Step 1 — HDD, RAM memory

- Switch off the laptop and remove the battery

- Remove the HDD / Memory cover, secured by one Phillips screw.

Step 2

- There are two slots for memory modules.

Step 3

- Slide the HDD to disconnect it from the SATA connector and remove it.

Step 4

- Remove the metal folio secured by 4 Phillips screws and transfer it to the new HDD.
