INTRODUCTION

Sticking and broken keys means it might be time for a new keyboard. This guide will show you how to remove and replace your Toshiba's keyboard.

TOOLS:

- [Spudger \(1\)](#)
- [iFixit Opening Tools \(1\)](#)

Step 1 — Battery

- Use two fingers to pull the ridged lock tabs on the bottom of the computer toward the edges. This will unlock the battery.

Step 2

- Holding the left tab in place, use the groove located between the two tabs to pry the battery up and out.

Step 3 — Keyboard

- Carefully separate the keyboard from its assembly by pulling it out with the opening tool.

Step 4

- Pull out the keyboard gently and fold it backwards.

Step 5

- Pull out the connector attaching the keyboard to the main body of the laptop.

To reassemble your device, follow these instructions in reverse order.
