

# Toshiba Satellite C855D-S5303 Battery Replacement

If your laptops battery dies frequently or will not hold a charge it may be time to replace it. This step by step guide will show you how.

Written By: Courtney Burns

## INTRODUCTION

This guide will show you how to remove your laptops battery. This process requires no tools; just your hands! When doing this, make sure that the device is powered off and not hot from recent usage.

## Step 1 — Battery

- Lay your laptop upside down on a flat surface.
  - Power off your laptop and unplug the charger.
- ⚠ Make sure you allow the laptop time to cool so that you aren't removing a hot battery.

## Step 2

- Locate the right eject switch, labeled "1".
- Slide the switch all the way to the right and it should stay in place.

### Step 3

- The second eject switch is on the left and it is numbered "2".
- Slide the switch to the left and remain pushing on it, because unlike switch "1" it will not stay in place on it's own.

### Step 4

- With hand still pushing the left switch, grab onto notch at the center of the two switches.
- Pull up and towards you. The battery will begin to lift out of the device.

## Step 5

- The battery can now be pulled out entirely. You are ready to replace it.

To reassemble your device, follow these instructions in reverse order.
